THE ROYAL NORFOLK SEED ESTABLISHMENT,

NORWICH, ENGLAND.

Dead Office and Retail Establishment. ROYAL ARCADE. Telephone :- No. 38.

> Seed Warehouses. BEDFORD STREET Private Telephone.

GOLO MEDAL AWARDED BY THE ROYAL AGRICULTURAL SOCIETY. JUNE, 1911.

Seed Grounds. TUNSTEAD AND EATON. Private Telephones.

Murseries. THE TOWN CLOSE NURSERIES, NEWMARKET ROAD. Telephone :- No. 39.

TERMS OF BUSINESS. &c.

All orders from unknown Correspondents must be accompanied by a sufficient Remittance or Bankers' Reference. To save the heavy cost of Booking now entailed, a Remittance should in all cases be sent with Orders under 20s. in value.

ACCOUNTS—DISCOUNTS.—All accounts are due net in three months; we however allow a discount of 5% on orders of 20s. and upwards, when accompanied by a remittance, or when paid within fourteen days of date of invoice, with the exception of "Collections," Cut Flowers and Floral Designs, all of which are strictly net.

ADDRESSES.—Full Name and Address should be sent with every communication, and nearest Railway Station should be stated with every order, as much time is thereby saved, especially in our busiest season, when we often receive from 1000 to 1500 letters daily. In consequence of this large correspondence, we suggest that, at all seasons, Cut Flower Orders and other Urgent Letters should be so marked on the envelope.

CARRIAGE ON GOODS .- We pay carriage on the following Articles to any address in the British Isles :-

All KITCHEN GARDEN and FLOWER SEEDS of the value of 5s. and upwards.

SEED POTATOES, CULINARY ROOTS, HORTICULTURAL TOOLS and SUNDRIES (except Potting Soil, Sand, Manures, etc.), if included in a general Garden Seed order of the value of 40s. in all.

Roses from the open ground, in quantities of one dozen and upwards.

We do not pay carriage on the following, owing to the heavy cost, in proportion to the value:

SEEDS and Roses of less quantities than those mentioned above.

TREES AND SHRUBS, FRUIT TREES AND BUSILES, PLANTS AND ROSES IN POTS.

POTATOES AND HORTICULTURAL SUNDRIES, of less value than mentioned above, Manures, Mushroom Spawn, Silver Sand,

Peat and Loam, Mats, Tools, &c., if ordered alone.

N.B.—Should the cost of Postage or Rail Carriage be increased during the currency of this Catalogue, we reserve the right to charge any difference.

CHANGE OF ADDRESS.—We shall esteem it a favour if our customers, on changing their residences, will kindly favour us with their new addresses, so that we may be able to send them our Catalogues as usual.

CHEQUES, MONEY ORDERS, AND POSTAL ORDERS.—Should be made payable to Daniels Bros. Limited, and crossed "Barclays Bank Limited," Norwich. Letters containing coin (or Treasury Notes) must be registered according to Post Office regulations.

CO-OPERATION IN SENDING ORDERS.—Cottagers, and thoso requiring individually but small quantities of Seeds if they join together in sending their orders, will be allowed a special discount of five per cent., to be taken in sceds, besides the usual discount of five per cent. for cash, thus:—for every 40s. remitted, 44s. worth of seeds may be ordered. No order can be recognised under these terms unless over the net value of Two Pounds, and accompanie by prepayment in full. Each order will be packed separately, and consigned in one package, but full name and address of each customer ordering under this arrangement should be sent. Special terms will be quoted to the Allotment Holders' Societies on application from the Secretary.

CORRESPONDENCE. Most Important.—Our customers having occasion to write to us respecting any order previously sent by them, will much facilitate attention to their letters if they will kindly state the date on which the order was sent, and if remittance was enclosed name the amount; this will enable us more readily to identify their orders on reference to our Registers.

PACKAGES.—All packages are charged at the lowest cost price, and are not returnable, unless sent back in good condition, and Carriage Paid, within fourteen days of receipt of goods. Customers are particularly requested to put their name and address on each package, and to advise us by post when returned, or they cannot be credited.

PRICES, ALTERATION OF.—Owing to the uncertainty of procuring further supplies of Vegetable Seeds and Potatoes, the prices quoted in this Catalogue may be cancelled at any time after March 31st, 1921.

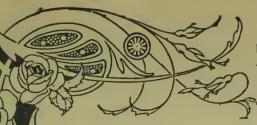

PACKETS.—Will our customers kindly note that, in all cases where Seeds are quoted by the "Packet," this is the minimum quantity that we can supply; smaller quantities or half-packets are not sold by us.

RECOMMENDATIONS.—The many kind recommendations to new customers with which we have been favoured in the past have been very gratifying. Should any of our customers have friends requiring Seeds, Plants, &c., to whom a copy of our Illustrated Guide would be acceptable, we shall feel much obliged by an intimation of the fact.

WARRANTY.—Daniels Bros. Limited, Norwich, give no warranty, expressed or implied, as to description, quality, productiveness or any other matter connected with seed or seed grain supplied by them, beyond the analyses required in accordance with the "Testing of Seeds Order, 1918," nor will they in any way be responsible for the crop. It must therefore be clearly understood that if the purchaser does not accept the goods on these terms, they are at once to be returned.

Telegraphic Address :- DANIELS, NORWICH. Telephones-38 & 39 Norwich.

January 1st, 1921.

SEEDSMEN
BY APPOINTMENT
TO HIS MAJESTY
KING GEORGE V.

NURSERYMEN
BY APPOINTMENT
TO HER MAJESTY
QUEEN ALEXANDRA.

To-our-Customers

There are signs on every hand that the greatly increased interest in Horticulture aroused during the War is likely to be permanent, but there is yet abundant scope for extension in the cultivation of Vegetable and Potato crops by Amateur Gardeners. Nothing is more conducive to the health and happiness of the nation than the cultivation, in the leisure afforded by shorter working hours, of gardens and allotments.

The additional warehouse accommodation provided by us during the past two years to meet the greatly increased demands in our Potato and Kitchen Garden Seed Departments, although giving us double the space previously available, was utilised to the utmost capacity last Spring, but we were able to give prompt service to our customers, and our arrangements for the coming Seed Season will ensure a continuance of the same. Our new Seed Farm at Tunstead, occupying 225 acres of the finest arable land in East Anglia, has enabled us to produce largely increased crops of many of our own well-known Specialities in Vegetable and Flower Seeds.

KITCHEN GARDEN SEEDS. The past Summer was an exceedingly anxious one for all Seed Growers; the long spells of cold, sunless weather in the height of the growing season was very trying for all crops. East Anglia was, however, more fortunate than most districts, and we are again able to offer full ranges of all Vegetable Seeds at the same prices (with a few minor exceptions) as last season.

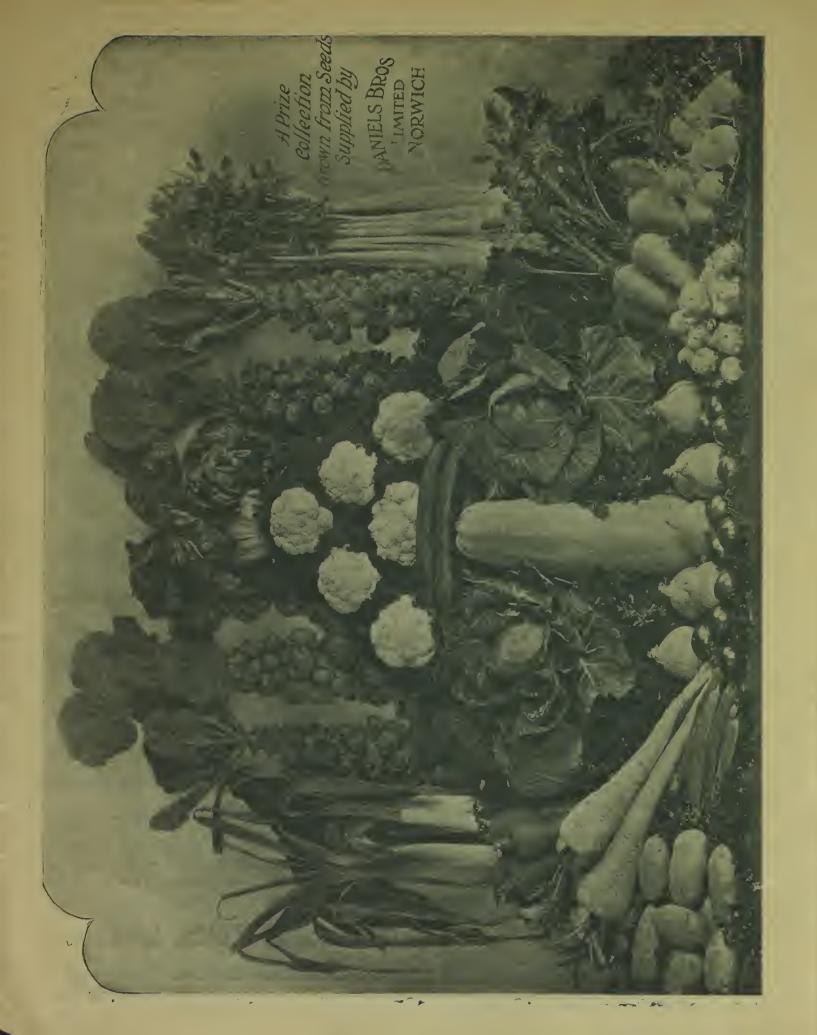

SEED POTATOES. We have secured from our growers in Scotland a supply of all the best varieties, for which we enjoy a big demand; our stock includes all the best Immune sorts, which have given good results in our trials for cropping and cooking. We shall carefully hand pick and grade our supplies, as has been our custom in the past, these selected tubers giving our customers heavier crops of best quality.

FLOWER SEEDS. We have this Summer had most successful results in the selection and improvement of the popular varieties of Choice Flower Seeds, and we offer the finest strains procurable in ASTERS, STOCKS, ANTIRRHINUMS, and all the popular annuals. We devoted a larger area than ever before to the cultivation of the very choicest varieties of SWEET PEAS, and on pages 54-56 will be found the pick of the best kinds. As we anticipated, last Spring witnessed a greatly increased demand for Flower Seeds, and we have made full provision for a further increased demand in the coming sowing season.

NURSERY STOCK. In this important branch of our business we offer a wide range of all the varieties of ORNAMENTAL TREES & SHRUBS, FENCING & HEDGING PLANTS, FOREST TREES, Etc. We transplant our stock regularly, and it is always in excellent condition for moving.

FRUIT TREES & ROSES. The demand for these has again been a very heavy one this Autumn, and whilst we are able to offer comprehensive lists on pages 76-83, we would ask our customers where feasible to leave the selection of sorts to us. As the season advances it is certain that many sorts will be sold out; having, however, rigidly cut down the number of varieties, so that only the very best of each class are cultivated, we can promise that where the selection is left to us no indifferent kinds will be sent.

NORWICH, Jan. 1st, 1921. DANIELS BROS. Ltd.

KITCHEN GARDEN SEEDS.

Our large experience in this department has enabled us to select the finest possible stocks, the same being grown on our own grounds or under our personal supervision. The growth of all seeds is carefully tested before sending out, and customers ordering from us may thoroughly rely on being supplied with the best and newest varieties, all of good growing quality.

DANIELS' COMPLETE COLLECTIONS OF CHOICE VEGETABLE SEEDS.

All Package and Carriage Free.

These Collections, of which we annually sell immense quantities, are carefully made up with seeds of finest quality in best varieties from each class with a view of furnishing an ample supply of Choice Vegetables throughout the year, and will be found extremely valuable for those who have not sufficient time or experience for making their own selection.

As our Collections are made up on a most liberal scale, intending purchasers will kindly bear in mind that it is only by having Seeds specially grown, and by preparing the packets beforehand in large numbers, that we can be so liberal in the quantity of the Seeds supplied for the amount charged, and that by ordering our selections, instead of making their own, will reap an advantage of at least 25 per cent. below the general Catalogue prices. We therefore wish it to be understood that no reduction, alteration, or substitution can be allowed in any of the collections. When ordering please quote Number and Price of the Collection required.

"Your No. 9 Collection was a complete successlast year, so have pleasure in again ordering another, and thanking you for your prompt attention."—Mr. M. BAXTER, Dudbridge.

No. 10. The Cottager's Packet, 4s. 6d. Postfree.

Containing fifteen varieties of choice Vegetable Seeds, including & pint of Peas and fair quantities of Broccoli, Cabbage, Carrot, Lettuce, Onion, Radish, Turnip, &c.

This is a very cheap collection which can be highly recommended.

Cultivation.—Peas form one of the most valuable of garden crops, and when once started into growth, require, under favourable conditions, little attention beyond the staking of such varieties as need support, and mulching and watering in dry weather. Peas require a good rich soil, which should be well trenched, and should receive a liberal supply of well-decomposed manure early in the season. They are essentially a moisture loving plant, and only when the ground is well prepared can really satisfactory results be assured. Given these conditions, it is possible by a succession of sowings to have a continuous supply of Peas for the table from June till October, or even later.

First early varieties should be sown from the middle of January onwards, and the best sorts in this class are Daniels' Gem of the Season, Earliest of All, and The Pilot; if the seed is sown in boxes under glass in January, hardened off in a frame and planted out at the latter end of March or early in April, an advantage of ten days or a fortnight may be gained. Second early and main crop kinds should be sown in March and April, and for late use a succession of sowings at intervals from the beginning of May until the end of June should be made. For these sowings the tall varieties will be found more productive, and not so liable to mildew during hot weather. It should be borne in mind that although most of the Wrinkled seeded varieties may he sown in March, we do not recommend this unless the season is exceptionally favourable. We find from a careful record extending over ten years, that little if any advantage is gained by too carly sowings, and that Peas sown at the beginning of April take less time to come to maturity than the earlier sown ones. If this rule was more generally followed, we should hear less ahout bad germination amongst this class of Peas especially in cold wet seasons. The seed should be sown in drills and covered about two inches deep; allow four or five feet between each row unless it is desired to grow some other crop

Peas suffer greatly from the depredations of all kinds of vermin, and it will always he found of advantage to give protection either hy wire pea guards or some other means while the plants are growing. The rows should he earthed up before they are staked, and this should be done when the plants are about four inches high. If the tops of the sticks are cut evenly, and the pieces which are cut off placed between the large sticks at the hase, they will prevent the plants from falling about, and give them an upward tendency from the start.

A good mulching of manure placed on each side of the row will help to retain the moisture in dry weather. Where this is not possible they must be regularly watered during dry periods, and liquid manure given once a week; a mixture containing four ounces of Nitrato of Soda to one gallon of water will be found very useful for this purpose.

When it is desired to grow Peas for exhibition purposes the following points should be observed:—Sow the seed very thinly on ground that has been especially deeply trenched for the purpose, and which has been dressed with old farmyard manure or the remains of an old mushroom bed. If they are needed for early Summer Show it may be desirable to raise the seed on turves in a greenhouse and transfer them bodily to the border when ahout four inches high, hut, generally speaking, if the seed is sown in rows in March and April it will he found early enough.

When the plants have shown about four blooms, pinch out the leader

or top of the haulm. As soon as the pods have formed, choose the best shaped, and remove the others, leaving only two or three on each plant. Always select the strongest and healthiest plants for this purpose. When ready to gather, do not handle the pods, hut cut off with seissors so as to retain their bloom.

NEW PEA, DANIELS' EXPRESS.

A grand new first early Marrowfat variety, growing to the height of about 18 inches, and of great productiveness, bearing a profusion of handsome dark green pods, 4½ to 5 inches in length, well filled with peas of the most delicious marrow flavour. In habit of growth it somewhat resembles Competitor, but the pods are much darker in colour and better filled. We can strongly recommend this as one of the finest first early varieties Per pint 2s. 3d.; per quart 4s. 3d. yet introduced.

NEW PEA, DANIELS' LEADER.

A new first early dwarf Pea, of hardy constitution, very similar to the well-known Pilot, but growing only 12 to 15 inches high, thus requiring no sticking. The pods are equal to Pilot in size and at same time it is more prolific, and like that variety can be sown earlier than the dwarf wrinkled sorts with the certainty of per ½ pint 1s. 6d.; per pint 2s. 9d.

NEW PEA, HUNDREDFOLD.

A new early marrow of great productiveness; it grows about 2 feet high, bearing a heavy crop of fine, handsome dark green pods 5 inches in length, well filled with fine peas of excellent flavour. This variety is well worthy of a trial, as it is sure to give satisfaction. Per 1 pint 1s. 4d.; per pint 2s. 6d.

"The Vegetable Seeds I had from you have exceeded my expectations, especially the Express Peas."—Mr. S. HENNELL, Breatford.

DANIELS' EXPRESS. Reduced from a Photograph.

Section I.—Earliest Varieties.

DANIELS' SELECTED GRADUS,

This large-podded early wrinkled variety, is without doubt the finest and most distinct early Pea yet introduced. The haulm which grows to the height of three to four feet is well covered with large dark green pods, averaging five inches in length, and well filled with eight to ten fine Peas of the most exquisite flavour; indeed, amongst the early varieties it has no rival in this respect. It is an excellent cropper, this combined with its earliness and grand flavour, has made it a favourite with all growers.

Per pint 2s. 3d.; per quart 4s. 3d.

DANIELS SELECTED GRADUS. Reduced from a Photograph.

DANIELS' BEST OF ALL. A very fine dwarf Early
Marrowfat variety, growing only about eighteen inches
in height. It is an abundant cropper, bearing quite
a profusion of handsome pods of 3½ to 4 inches in
length, each with seven or eight large finely-flavoured
peas. It is as early as English Wonder, and will
prove a splendid and profitable Pea for the market
or private grower ... per pint 2s. 0d. 3 9

THE PILOT. This valuable introduction has taken a leading place amongst the most useful varieties, both for market and private garden purposes. It is a first early cropper producing deep green pods of the well-known Gradus type, and on account of its hardy constitution and the seed being round it may be sown early with the certainty of a crop. It is a vigorous branching plant, growing three feet in height, bearing a large proportion of the pods in pairs, which contain fine deep green peas of excellent marrow flavour. per pint 3s. Od. 5

DANIELS' GEM OF THE SEASON. The earliest Pea in cultivation, and very prolific. Is always the earliest, whether sown in Autumn, Winter, or Spring. Is also the hardiest, resisting frost better than any other kind, and is not affected by mildew. Being very prolific and of a most delicious flavour, will be found a most desirable variety for early work. Height 3 ft. per pt. 1s. Sd.

EARLIEST OF ALL. A round blue-seeded Pea of excellent and rich flavour; very prolifie, can be sown early. Ht. 2½ ft. pint 1s. 8d.

english wonder. One of the most useful of the dwarf varieties, of good constitution and very prolific, may be sown earlier than some of the wrinkled sorts. Height 1 ft. per pint 1s. 9d. 3 3

LAXTONIAN. A fine early wrinkled pea of dwarf habit and vigorous constitution. A very heavy eropper, the haulm being covered with fine dark green pods 4 to 5 inches in length, well filled with nine to ten large peas of the finest flavour. Can be highly recommended. Height 1½ ft. per pint 2s. 0d.

LITTLE MARVEL. A fine dwarf early variety of compact growth, and an exceptionally heavy cropper. The pods are of medium size and well filled with fine peas of excellent flavour; a great acquisition to our first early serts. Height 1 ft. per pint 2s. 6d.

THOMAS LAXTON. Award of Merit, Royal Horticultural Society.

A large-podded first early Pea, coming in with Earliest of All,
but with pods of double the size, and rich dark green colour.
It is a true wrinkled Marrow, a grand cropper, and the flavour
is of the best. Height 3 ft. . . . per pint 2s. 3d. 4 3

WITHAM WONDER. A first-class early Dwarf Pea of hardy constitution, about same height as the well-known English Wonder, and like that variety an enormous eropper; excellent for small gardens per pint 2s. 0d. 3 9

[&]quot;I had some Pilot Peas sometime ago, and they have been such a splendid frea and grand cropper that I thought I would try them again."—Mr. T. RATCLIFF, Newbury.

[&]quot;From the 1 pint of Pens, Gem of the Season, that I had in the spring, I have just finished picking, 5 pecks in all. No one that saw them has ever seen anything like them."—Mr. JAS. GOULT, Gorefield.

Section II.—Second Early.

DANIELS' DWARF PROLIFIC.

A grand second early dwarf wrinkled Marrow, of strong constitution and sturdy habit, growing about 1½ feet high; it is enormously prolific, bearing a profusion of dark green, slightly curved pods, four inches long, well filled with eight to nine peas of excellent flavour, at the same time it is an excellent variety for forcing, being quite as prolific under glass as in the open. It is a very compact grower, and will be an acquisition to all gardens where space is limited, on account of the little room it occupies as compared with its heavy cropping qualities.

Per pint 2s. 0d.; per quart 3s. 9d.

DANIELS' DWARF PROLIFIC.

NEW PEA, ADMIRAL BEATTY. A fine second early marrow pea, growing to the height of 3 to 4 feet, and producing an enormous crop of fine dark green pods 5 to 6 inches in length, and well filled with fine peas of excellent marrow flavour. This is without doubt a fine addition to our second early varieties, and when known is sure to be in great demand.

Per ½ pint 1s. 6d.; per pint 2s. 9d.

DANIELS' MIDSUMMER MARROW. A grand early Marrowfat Pea of a good hardy constitution. It is an abundant bearer; the pods, which somewhat resemble Gradus in shape, are 4½ to 5 inches in length and well filled with nine or ten fine peas of excellent flavour. We can thoroughly recommend this as a first-class variety for all purposes.

Height 3 to 4 ft. per pint 2s. 3d. 4 3

LAXTON'S SUPERB. A very early semi-wrinkled pea, carrying an immense crop of large dark green pods containing from nine to ten peas each, which have a very fine flavour. It is somewhat similar to Pilot, but with pods double the size of that variety, and is very hardy. Can be sown early, as the peas do not rot in the ground like fully wrinkled varieties. Award of Merit, R.H.S.

Height 2 to $2\frac{1}{2}$ ft. per pint 2s. 3d. 4 3

DAISY. A dwarf second early wrinkled Marrow of great merit.

The haulm, which is very robust, is well hung with handsome pods four to five inches in length, well filled with large peas of excellent flavour. On account of its numerous good qualities it has been awarded a First Class Certificate by the Royal Horti-

cultural Society. Height $1\frac{1}{2}$ ft. . . . per pint 2s. 3d.

DUKE OF YORK. A fine winkled Marrow, of robust habit, pods five inches in length; a very profitable bearer, coming in a few days earlier than Duke of Albany, and like that variety, AI for a whistion. Height $\frac{3}{2}$ to $\frac{4}{3}$.

exhibition. Height $3\frac{1}{2}$ to 4 ft. per pint 2s. 3d. LYE'S FAVOURITE. Improved stock. A new selection of this fine second early variety, of hardy constitution and enormous productiveness, bearing a profusion of long, handsome, slightly curved pods, well filled with peas of excellent marrow flavour. Very useful for early sowing on account of its extreme hardiness. Height 3 to 4 ft. per pint 1s. 8d.

ness. Height 3 to 4 ft. ... per pint 1s. 8d. SENATOR. A very prolific variety, bearing the pods mostly in pairs; these are from four to five inches in length and well filled with peas of a fine marrow flavour. Height 3 ft. per pint 1s. 9d.

WILLIAM THE FIRST. Selected stock. One of the finest early green Marrows, combining flavour and earliness, and produces a very heavy crop of slightly curved dark green pods, well filled with peas of excellent colour and flavour, and is one of the best varieties for market purposes. Height 4 ft. per pint 1s. 8d. 3 0

[&]quot;I have had wonderful results from your Dwarf Prolific Peas the last two seasons."—Mr. A. HUGHES, Herne Hill.

[&]quot;Your Dwarf Prolific Peas are getting quite the rage, as it suits this district well; it is a grand cropper here. I have found it the very best that can be grown on our solt."—Mr. J. S. DEANE, Bradford.

Section III.—Main Crop.

DANIELS' SELECTED DUKE OF ALBANY.

A fine selected stock of this useful Main Crop Pea. It grows between 4 and 5 feet in height. The haulm being covered with a very heavy crop of long handsome dark green pods, averaging five inches in length, which are well filled with 10 to 12 large peas of the true marrow flavour. A splendid variety for exhibition, whilst its fine cropping qualities combined with its excellent flavour will recommend it alike to the private grower and the market gardener.

Per pint 2s. 0d.; per quart 3s. 9d.

DANIELS' SELECTED DUKE OF ALBANY.

THE DANIELS'. An extra large podded Main Crop variety of great merit. It is of robust constitution, the pods are long and handsome, averaging five to six inches in length, and well filled with ten to twelve large peas of the finest marrow flavour. It is a very heavy and reliable cropper, and a most useful sort for exhibition; strongly recommended for general crop. Height 4 ft. . . per pint 2s. 3d. 4 3

DR. MACLEAN. A fine wrinkled Marrew, of vigereus grewth, wenderfully preductive, flavenr of the first quality. Height 3½ ft... .. per pint 1s. 8d. 3 0

FILLBASKET. Very prolific. Height 3 ft. per pint Is. 9d. 3 3

GLADIATOR. The plant is very rebust and vigereds, stem branched, grewing about three fect in height, exceedingly productive, bearing in pairs an abundance of long curved handsome peds, which are very clesely filled with medium-sized peas of excellent quality. First-Class Certificate, R.H.S. Height 3 ft. per pint 1s. 8d.

MACLEAN'S WONDERFUL, or PRINCE OF WALES.

Excellent cropping variety ef superior flavour. Height

3 feet per pint 1s. 6d.

PRIDE OF THE MARKET. A fine dwarf variety, ef excellent crepping qualities. The dark green pods which are borne in profusion, each centain 8 te 9 peas, of goed size and of the finest marrow flavour; a grand sert for small gardens where space is limited. Height 2 feet per pint 1s. 8d. 3 O

"All the Seeds have given great satisfaction last year, the Carrots and Pride of the Market Peas gave enormous crops."—Mr. E. ATKINSON. Minster.

"Your Matchless Marrow Peas have turned out the finest I have ever grown."—Mr. E. BRADFORD, Hampden Park.

"I took First and Second Prizes with your Seeds at Wim Show with Peasand Dwarf Beans."—Mr. H. RAVENSCROFT, Wim.

"I am pleased to say the crops raised from your Seeds last season gave great satisfaction, especially the Matchless Marrow and Stratagem Peas, they were extra large."—Mr. F. GATCH, Beanscote.

" I have great pleasure in thanking you for Seeds purchased from your last year's success was great. I won First Prize with Duke of Albany Peas and First with Beet "—Mr. J. GARNETT, Coventry.

"I grew your Matchless Peas last year, also the Recorder, and I must say that they are the finest Peas I have ever grown."—Mr. C. SIMPSON, Luton.

"I had great success from your Peas last year—they were a picture. I have never seen Peas hang in such profusion before."—Mr. H. CARDER, Portland.

"Wo were delighted with the results we got from your Dwarf Prolifice Peas, and only wish we had more garden to be able to grow more of them."

—Miss H. LOVE. Skelton.

"Your Seeds were excellent last year, and I can tell you your Dwark Prolific Pea was easily the best round here; the Sensation Potatoes are grand croppers."—Mr. E. DUGGAN, Greet.

Section III.-Main Crop.

DANIELS' RECORDER.

A grand long-podded Main Crop variety, growing about 3 feet high. The haulm, which is very robust, is well hung so do with large pods, which are of a deep green colour, averaging from 5 to 6 inches in length, and contain 10 to 11 fine peas

NEW PEA, DANIELS' RECORDER.

of excellent colour and of the finest marrow flavour. Its great prolificness, combined with the large size of the pods, make it one of the most useful varieties, both for table and exhibition purposes. We can strongly recommend this fine variety to our customers.

Per pint 2s. 3d. 4 3

podded pea yet introduced. It grows to the height of 5 to 6 feet, bearing a great profusion of long, handsome, dark green pods, which are borne mostly in pairs, and average from 6 to 7 inches in length, containing large peas of excellent flavour. It is a most valuable sort for exhibition purposes, having gained numerous first prizes. It is a Main Crop variety, coming fit for use about the same time as Alderman, and somewhat resembles that variety in habit of growth.

(Very Scarce). In pkts. only, 1s. per pkt.

- DANIELS' COMMANDER. A superb dwarf Marrowfat variety of robust constitution, with rich dark green pods and foliage, and is a splendid cropper. The individual pods are of large size, from 4 to 5 inches in length, containing on an average nine large peas of the finest marrow flavour; will be found a most useful sort for all purposes. Height 1½ to 2 ft. per pint 2s. 0d. 3 9
- DANIELS' MAIN CROP MARROW. One of the finest Marrow Peas in cultivation, and of the same flavour as the old Ne Plus Ultra; but the pods are longer. It is very prolific, bearing a profusion of dark green, well-filled pods, each containing eight to nine large peas of exquisite flavour; as a Main Crop variety it should be in great demand on account of its numerous good qualities ... per pint 2s. 0d. 3 9

STRATAGEM. This is a splendid variety, with pods five to six inches in length, containing eight to ten large fine flavoured peas. First Class Certificate, R.H.S. Our own selected and improved stock. Height 2 ft. per pint 1s. 9d. 3 3

TELEGRAPH. A hardy variety of first-class quality and strong constitution, pods large and well-filled; also fine for exhibition. Height 4 ft. per pint 1s. 9d.

TELEPHONE. First Class Certificate, Royal Horticultural Society.
This fine variety is good either for exhibition or market purposes.
Height 4½ ft... per pint 2s. 0d.

TRIUMPH. A blue wrinkled Marrow, of exquisite flavour; the pods are long and well filled, each containing nine to eleven large peas. In constitution it is robust and hardy. Height 2 to 3 ft. per pint 1s. 8d.

YORKSHIRE HERO. A fine dwarf Marrow Pea, of the Veitch's Perfection type, is very prolific, bearing a profusion of well-filled pods, containing six to eight large peas each; flavour first-class. Height 3 ft. per pint 1s. 8d.

[&]quot;Your Matchless Marrow Peas were simply lovely again this year, 9 and 10 in nearly every pod; there was none in Worcester Park like them."—Mr. T. LANE, Worcester Park.

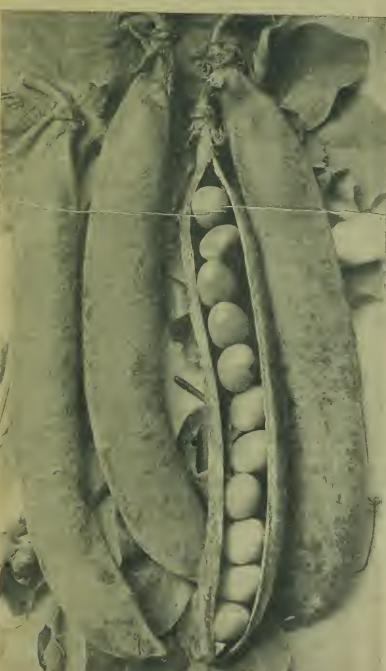

[&]quot;I should like to add that the Peas I had from you last year turned out a great success, much to the envy of all my amateur gardening friends."—H. W. SMITH, Esq., Bournemouth.

Section IV.—Late Varieties.

DANIELS' DISTINCTION.

A very fine late variety which comes in about the same time as "Ne Plus Ultra," and which it rivals in its culinary qualities. The plants are of strong robust growth, attaining a height of about $3\frac{1}{2}$ feet, and producing an abundance of handsome dark green, slightly curved pods, five to six inches in length, filled with large peas of the finest and most delicate flavour. We can highly recommend this as one of the very best for exhibition; for a late crop it is unrivalled ... Per pint 2s. 3d.; per quart 4s. 3d.

GLORY OF DEVON. Award of Merit, Royal Horticultural Society. A fine addition to our late varieties of Peas. It is of hardy constitution and containing eight to ten large peas of delicious flavour. For exhibition it is first-class per pint Is. 9d.; per quart 3s. 3d.

[&]quot;The Matchless Marrow Peas were excellent last year."-Mr. F. C. MICO, Porth.

DANIELS' NORFOLK GIANT LONG-POD. From a Photograph

BEANS—Broad.

Cultivation.—This highly nutritious vegetable grows well in any goods garden soil, but responds readily to liberal treatment and should, therefore, when possible, be grown in well-prepared ground which has received a good supply of manure. The cultivation is of the easiest and everybody should be able to grow them successfully.

The easiest saving should be made in February with our tigelested.

The earliest sowing should be made in February with onr "Selected Long-Pod," this being one of the earliest and best sorts. For the main

crop, sow in March and for a succession in April.

The seed should be sown in double rows 6 inches apart, with an intervening space of 3 feet between the pairs of rows; place the seed 6 inches apart in the rows, earth up the plauts by drawing the soil around them. when they are about 6 inches high, give a good covering of ashes to keep

When the plants have made a good growth and set a nice quantity of bloom, the centres should be nipped out, thereby throwing more vigour

iuto tho pods.

A liberal supply of liquid manure given at intervals during the bearing season will add much to the size of the pods, as also will a mulching of decayed manure, if put on before the hot weather comes.

The Windsor varieties whilst not giving such long pods are of excellent flavour; the best varieties for exhibition purposes are Daniels' Notfolk. Giant Long-pod, which produces the finest pods of any of the long-podded section, and Daniels' Mammoth Windsor, which is by far the best of its class

WHITE-SEEDED VARIETIES,

- DANIELS' NORFOLK GIANT LONG-POD. The longest-podded Bean known, has been grown up to 18 inches in length. The pods are of very handsome shape and excellent quality. First-class for exhibition, having obtained numerous First Prizes per pint 1s. 9d. 3 3
- DANIELS' MAMMOTH WINDSOR. The largest Broad Bean in cultivation. Very prolific, bearing a large quantity of fine broad pods, containing beans of exceptional size. These are of fine quality, and of flavour equal to the old Broad Windsor per pint 1s. 6d. 2 91

DANIELS' SELECTED LONG-FOD. A grand selection of the Early
Long-pod. Very prolific, pods larger and finer than the old
variety; useful for exhibition . . . per pint 1s. 6d. 2 9
BROAD WINDSOR. Fine selected stock . . per pint 1s. 3d. 2 3

HARLINGTON WINDSOR. Larger and finer pods than the old Windsor; very prolific per pint 1s. 4d. per pint 1s. 4d. 2 6 JOHNSON'S WONDERFUL (Mackie's Monarch) per pint ls. 3d. 2 3

per pint 1s. 3d. 2 3 MAZAGAN. Small, early, and hardy

GREEN-SEEDED VARIETIES.

- DANIELS' IMPROVED GREEN WINDSOR. An abundant hearer pods large to a series of the seri abundant bearer, pods large; a great improvement on the old variety....... per pint 1s. 6d. 2 9
- DANIELS' MAMMOTH GREEN LONG-POD. A very fine selection of this type, the pods being longer and much better filled than those of the old variety, and of excellent flavour per pint 1s. 6d. 2 9

BECK'S GREEN GEM. A fine dwarf bean, excellent for small gardens per pint ls. 4d. 2 &

[&]quot;The Long-Pod Beans did very well, every seed germinated, the crep being one 1 of the earliest round here."—Mr. J. FAILHERS, Lound.

[&]quot;I won First Prize with Long-Pod Beans, some of the pods over 16 inches long, and greatly admired."—Mr. R. JACKLIN, Binbrook.

[&]quot;Your Seeds last season gave every satisfaction, especially Giant Lorg-Ped Beans, some of which were 12 inches long; also Matchless Marrow Peas casily met with description given. Brussels Sprouts were worthy of being photographed."—Mr. A. HOLMES,

[&]quot;I am pleased to say I am more than satisfied with garden Seeds supplied by you, which include Peas, Broad Beans, Parsnip, Carrot, and five kinds of Potatoes,"—Mr. J.. HARRINGTON, North Edmonton.

[&]quot;I am pleased to inform you how successful I was at our Annual Show, Fon> Specials, Six Firsts and One Second."—Mr. B. ASHWORTH, Sommerscat.

DANIELS' GIANT SCARLET. Reduced from a Pictograph.

BEANS-Runner.

Cultivation .- Runner Beans form one of the most important and profitable of all garden crops grown for Summer and Autuinn use, and vield a liberal supply of vegetables available for use after the main crop l'eas are over.

They are easy of culture and may be grown as screens in small gardens, thus serving the double purpose of covering a trellis or wall and at the same time yielding a crop of delicious vegetables.

The ground should be prepared in the same manner as for other Beans, but Runners being somewhat tender the seed should not be sown until early in May.

Sow the seed in double rows 9 inches apart, and, if possible, allow a space of 12 feet between each double row, cropping the intervening space with other vegetables.

For a succession make further sowings in June and July

When the plants are about 9 inches high, draw the earth round them, and place tall, strong stakes to the rows, taking care to make them very firm and ablo to withstand the wind. A good mulching of rotted manure during the cropping season will lengthen the period of bearing and give quality to the beans.

Where it is impossible to procure tall stakes, it is the practice to take out the leading growths when the plants are about a foot high, thus encouraging a spreading habit and in this way good crops may be grown and space economised.

The best varieties both for exhibition and general purposes are Daniels' Giant White and Daniels' Giant Scarlet.

- DANIELS' GIANT SCARLET. A grand variety both for exhibition and the table, and is at the same time one of the most prolific varieties with which we are acquainted. The pods are long, straight, and of excellent quality. Our own selected stock
- per \(\) pint 1s. 3d.; pint 2s. 3d. 4 3 DANIELS' GIANT WHITE. This is without doubt the finest type of Runner Bean extant, bearing in profusion long, green, thick, fleshy pods, upwards of twelve inches in length and nearly two inches in breadth. This variety, besides the best for culinary purposes, will also be found a grand exhibition kind
 - per ½ pint 1s. 6d.; pint 2s. 6d.
- SCARLET EMPEROR. A giant amongst Scarlet Runner Beans, producing fine straight pods fifteen inches in length, and is enormously productive. A grand sort for exhibition .. per 1 pint 1s. 3d.; pint 2s. 3 9
- BEST OF ALL. One of the longest-podded of the Searlet Runners, very prolific. The pods, which are long, straight, and very handsome, are produced in large clusters. It is of excellent table quality, and one of the best for exhibition per pint Is. 9d. 3 3
- NE PLUS ULTRA. A fine variety for exhibition and main crop, producing a large quantity of fine pods of spleudid form, from ten to fourteen inches long, and quito straight. To grow it to perfection each bean should be planted one foot apart in per pint 1s. 9d. 3 3
- OLD SCARLET RUNNER. For general crop per pint 1s. 9d. 3 3

VEITCH'S CLIMBING KIDNEY BEAN. First Class Certificate, Royal Horticultural Society. This Bean combines the best features of the two types, Dwarf French and Scarlet Runner. It crops earlier than the Runners and has all the delicate flavour and scall the state of the Dwarfer height 64-7 feet per pint 28 Od. per pint 2s. 0d. 3 9 and quality of the Dwarfs; height 6 to 7 feet

[&]quot;I took 46 First and 20 Second Prizes with Seeds supplied by you."-Mr. D. JENKINS, St. Davids.

[&]quot;Pleased to tell you that I won 21 Prizes and 2 Specials from your Seeds this year."—Mr. W. COLE, Liskeard.

[&]quot;I have had an allotment over 20 years, and I have never had such crops before this year. I think your Seeds are the most genuine I have ever grown."—Mr. C. BAKER, Old Fletton.

[&]quot;I have great pleasure in informing you that I did exceedingly well at our Show this year, the majority of Prizes being taken from Seeds purchased from your firm. I took 15 First, 6 Second and 2 Third Prizes, also First Prize for the best allotment, and Special Prize for the largest Marrow in the Show."—Mr. A. CHAPMAN, Wheathampstead.

BEANS—Dwarf French.

Cultivation.—This useful vegetable may be grown by almost any one, as sufficient space for a row may be found in even the smallest garden. With attention to the preparation and manuring of the ground, there should be no difficulty in having a continuous supply of French Beans for a considerable portion of the Summer and Autumn.

The culture is of the simplest; the ground having been thoroughly dug and manured in early Spring, the Beans should be planted about the end of April; the rows should be $2\frac{1}{2}$ feet apart and the Beans placed about 4 inches apart in the row, any gaps in the row may be tilled up by transplanting the seedlings when just past the seed leaf.

The soil should be drawn round the plants to protect them from cold winds in Spring, and during the time of bearing occasional waterings with weak liquid manure will add much to the size of the produce and lengthen the period of bearing.

Daniels' "Incomparable" can be highly recommended on account of its great prolifieness and excellent quality.

Where greenhouses are available the earliest sowing may be made at the beginning of April and the young plants transferred to the outside border when large enough to handle. A crop may also be grown in the early months of the year in heated frames or greenhouses, the seed being sown in 8-inch pots half filled with good rich soil, and the pots gradually filled up with soil as the plants grow. It is most important that French Beans should be gathered as soon as ready, otherwise the plants will gradually give up blooming and the crop be much reduced.

DANIELS INCOMPARABLE. From a Photograph.

DANIELS' INCOMPARABLE. This splendid dwarf Kidney Bean since its introduction has fully justified our high opinion of it, both as regards quality and prolificness. The pods are of great length, straight, and of a rich clear green colour, very tender, and of the best culinary quality. It is of strong constitution, sturdy habit, and wonderfully prolific. It is quite distinct in the seed and has proved a decided acquisition ... per pint 2s. Od.

DANIELS' WONDERFUL (new). This is without doubt the longest podded Dwarf French Bean yet introduced. The pods which are very straight and handsome, grow to the length of 10 to 12 inches, and are produced in great abundance. It is at the same time very tender and of fine quality. Excellent alike for exhibition and the table, and is highly recommended ... per pint 2s. 0d. 3 9

DANIELS' EARLY BLACK WONDER.

We can highly recommend this splendid variety as one of the hardiest and most prolific French Beans in cultivation. The pods are long, of a light rich green colour, tender, and of fine flavour per pint 1s. 9d.

canadian wonder. Abundant bearer, very fleshy and tender. The pods are long and of excellent shape and quality; one of the best for general erop per pint 1s. 6d.

EARLY GOLDEN BUTTER. Pods thick and fleshy, nearly transparent, and of a bright yellow colour, which is retained when boiled; excellent flavour per pint 1s. 9d.

NEGRO LONG-POD. Useful variety, heavy eropper per pint 1s. 6d.

NE PLUS' ULTRA. The finest Kidney Bean in cultivation for all purposes. First-Class Certificate, R.H.S. per pint 1s. 9d. 3 3

ALL KINDS MIXED per pint 1s. 6d. 2 9

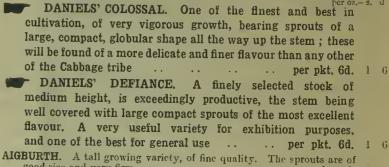

[&]quot;I have had all my small Seeds from you this year, and I have got the best garden I have ever had—Onions, Carrots, Beet, and everything are splendid."—Mr. A. W. G. HAGGAR, Much Hadham.

^{*}I am very pleased with the Seeds I had this year, they have all dere remarkably well. I took one First and one Third Prizes from our Show this year."—Mr. T. JONES, Probus.

BRUSSELS SPROUTS.

Cultivation. -To grow Brussels Sprouts successfully the seed should be sown at the latter end of February or early in March on a sheltered border or talhyation.—To grow Brussels Sprouts successfully the seed should be sown at the latter end of February or early in March on a sheltered border or in a frame. Prick out the seedlings about four inches apart into seed beds as soon as they have made the first leaves, and directly the weather allows plant out permanently into well prepared ground, such as is used for general garden crops. For a later crop, a sowing should he made at the end of March, or early in April, and the seedlings planted as soon as possible; they cannot very well be planted out too early. Brussels Sprouts require plenty of room to develop, and therefore they should never be planted thickly. About 2½ feet apart in the row and 3 feet between the rows would be a suitable distance. Give a good supply of water when they are first planted, and keep the ground loose by frequent use of the hoe.

Brussels Sprouts thrive much better by themselves than when planted amongst other crops. In dry weather liberal supplies of liquid manure will be found of great advantage. Daniels' Colossal and Defiance are first-class stocks, and will be found the best for exhibition purposes and for general use.

good size and very firm DALKEITH. A fine selected stock of medium height, the stems being well covered with solid sprouts of fine flavour per pkt. 4d. SCRYMGER'S GIANT. An excellent tall variety; stems well covered with fine sprouts, of first-class flavour per pkt. 4d. SOLIDITY. A fine dwarf variety, the stems being well covered with extra hard solid spronts of medium size and of the finest quality per pkt. 4d. 1 0

"I am pleased to say the Seeds and Potatoes have turned out well, everything gave the greatest satisfaction. I have been dealing with your firm for 30 years, and your Seeds have never failed with me."—Mr. C. HOLLIDGE, Plumstead, S.E.

"I had excellent results last year from your Seeds. I had Brussels Sprouts (Colossal) 3 to 4 feet high, covered with sprouts as big as my fist from the ground to the top of the stalk."—Mr. G. KIRTLAND, North Evington.

"I must say over again your Sceds are excellent, I had bumping crops, especially Erussels Sprouts and Kiduey Beaus."—Mr. A. PIDOUX, Staplebill.

BORECOLE or KALE.

Cultivation .- Borecole is of great value for providing a supply of tender green heads from Christmas onwards, during the very severe weather when Cabbages and Broccoli are not available. Many varieties of Borecole are quite ornamental and present most attractive objects in the kitchen garden. Sow the seed in April in seed beds, and when the plants are large enough transplant them into their permanent quarters about three feet apart. As an alternative they may be planted between Potato rows.

Borecole likes good soil, but does not require liberal treatment with liquid manure, etc., as many plants of the same family do. Give a thorough watering at the time of planting ont. If there is any tendency to "clubbing" noticed in the garden, a dressing of lime applied in the Spring previous to planting will be found of great advantage. Daniels' Improved Drumhead can be highly recommended on account of its excellent flavour. It is much milder than some varieties.

Daniels' Moss Curled Exhibition will be found invaluable for general purposes.	
DANIELS' MOSS CURLED EXHIBITION. The finest	1.
strain of curled Kale in cultivation. It is of medium height,	
foliage dark green, and beautifully curled, is very hardy,

BROCCOLI.

DANIELS' NORFOLK GIANT.

FOURTH DIVISION.

Cultivation.—This excellent vegetable is of the greatest value during the Winter and early Spring, when Cauliflowers are not obtainable and vegetables generally are searce. They like a good rich firm soil, which has during the previous Autumn been thoroughly trenched and liberally manured. If pessible, choose a piece of land on which Celery has been grown. The earliest sowing of seed should be made at the latter end of March, and the principal equipment during the previous during the property of the property during the property of the p

The earliest sowing of seed should be made at the latter end of March, and the principal sowings during April, whilst May will be soon enough for the late varieties. Sow the seed either in a warm sheltered border or in a frame, in drills eight or nine inches apart and one inch deep. When the plants are large enough to handle, lose no time in pricking them out, as they quickly suffer if allowed to remain too long in the seed bed, becoming drawn and weak. The final plantings should be commenced in May, and followed on as opportunity occurs until the end of July, and as land becomes available. Choose the strongest plants first, as by this means a much better succession will be obtained.

The most important point in planting out Broccoli is to be quite sure that the ground is very firm; the harder it is the better it will be for the

The most important point in planting out Broccoli is to be quite sure that the ground is very firm; the harder it is the better it will be for the plants, as they will thereby be able to withstand the Winter, therefore if the land was trenched and manured during the past Winter, do not have it dug again just previous to planting out. Make the rows about $2\frac{1}{2}$ feet apart and place the plants about two feet apart in the rows. Water the plants thoroughly after planting and keep the weeds down.

EVIDENCE OF QUALITY.

- "I am well satisfied with all Seeds sent me last year, I cannot praise one more than another."—Mr. J. COLLOR, Dover.
- "I should like to express the satisfaction received from Seeds; they were admired by everyone. I took First Prize for them."—Mr. F. WILKES, Howle.
- "The Seeds I had from you last year have yielded splendid crops." Mr. G. BATEY. Bexley Heath.

DANIE .S KING OF THE BROCCOLL

BEET.

DANIELS' CRIMSON PERFECTION (Reduced from a Photograph).

Cultivation .- To ensure a crop of good Bectroot, it is of the highest importance that the seed should be of the very best strain procuration, such as offered by ourselves. Another very important point to observe is that the ground must not be specially manured for this crop, a good plan being to select a plot that has been cropped during the previous season with French Beans, Potatoes, or Celery. The soil should be a good light loam where possible, and in an open part of the garden; the ground should be deeply trenched (the deeper the better) quite early in the season. Before sowing, the ground should be made lirm and level.

Sow the seed any time from the middle of April to the end of May. For an early crop New Red Globe is one of the best. Daniels' Crimson Perfection and Green Top will be found the most useful for a general crop. The seed should be sown in drills one inch deep and about 18 inches from row to row. A liberal quantity of seed should be used to ensure a good plant, and when the seedlings are nicely up, they should be thinned out, leaving them about 9 inches apart. As a rule those sown at the end of May produce roots of better quality. Keep the beds regularly heed and weeded so that the

soil may be free about the plants.

When specimen roots are wanted for Exhibition, it is the usual practice to make holes about 2 feet deep in the bed with a crowbar, and fill them with fine soil. The seeds are sown in these and thinned out, one plant being left to each hole. In this way splendidly shaped roots are grown. The crop should be lifted in October and stored in dry sand in a shed or cellar for Winter uso. Care should be taken that the roots are not injured in any way, or they will bleed and lose quality; also the leaves should not be cut but twisted off with the hand. In this way the roots may be kept until the following Summer.

CARROTS.

DANIELS' TELEGRAPH. Reduced from a Photograph.

Stump-rooted Varieties.

DANIELS' SCARLET PERFECTION. A grand main crop variety of the intermediate type, and being stumprooted, it is well adapted for growing on soils where deep culture is not possible. The roots are of a bright orange colour, very handsome and uniform in shape, with a fine clear skin, which makes it a most desirable sort for exhibition. It is one of the best flavoured and heaviest cropping varieties for general use, and one we can highly .. per pkt. 6d. 1 6 recommend

DANIELS' NEW EARLY FORCING HORN. One of the earliest Carrots yet introduced. In shape it is nearly round. They can be left thickly in the row, and drawn for use as required pkt. 4d. DANIELS' HARBINGER. A fine Carrot for early exhibition; the roots are of good shape and excellent quality, averaging four to five inches in length, and three inches in diameter. It is a

Long Varieties.

DANIELS' TELEGRAPH. This grand Carrot is one of the best forms of intermediate yet introduced, being far in advance of the old James' Scarlet. It produces a heavy crop of roots, which are of uniform shape, attractive colour, and very clear in the skin. Where sufficient depth of soil exists it will prove one of the most profitable sorts to grow. It is unequalled for exhibition purposes, having obtained more First Prizes than any Carrot with which we are acquainted

JAMES' SCARLET (Intermediate). Excellent for shallow soils. One of the heaviest cropping and most useful for general use .. 0 10 LONG RED ST. VALERY. A very choice stock, producing clean

per pkt. 6d, 1 6

handsome roots and a great improvement on the Long Surrey Fine for exhibition per pkt. 4d. LONG RED SURREY or LONG ORANGE. Roots long, of good

shape, and fino quality; on a deep soil it will produce a very heavy crop ...

Cultivation.—By attention to a few points of importance, splondid clean straight Carrots can be cultivated without great delay. It is not necessary to manure the land for a Carrot crop, in fact, freshly manured land is a drawback; the soil should be (where possible) of a deep light nature, and the land should, the Antumn previously, be deeply trenched two to three feet, and a quite light dressing of manure given at the same time; land which has been recently used for Celery is excellent, and will not need specially manuring.

For the earliest crop, make a sowing on the hotbed in frames between the rows of early Potatoes, and pull the Carrots quite small. The first sowing of the outdoor crop should be made early in April on a warm border, Daniels "Harbinger" or "Forcing Horn" being excellent kinds; make other sowings to the rowings to the control of in succession through the Summer until August, when the best kind to sow is "Scarlet Horn." For main crop, "Daniels' Scarlet Perfection" and "Telegraph" can be highly recommended.

Carrot seed should be sown on borders of finely worked soil, in drills about a foot apart. When the plants are nicely up, thin out gradually, leaving the smaller growing kinds, such as "Foreing Horn," to be pulled as required, and the larger kinds seven to nine inches apart. Keep the hoo going between the rows to ensure cleanliness, and nothing more is needed until the end of October, when the crop should be lifted, the tops carefully twisted off, and the roots stored in dry sand in a cellar, for use as needed during the Winter.

When specimen roots are wanted for exhibition, it is the practice to make holes with a crowbar, and fill with fine soil, sowing the seeds on the

top and thinning out to one plant in each hole, as advised for Parsnips.

CHICORY.

THE FINEST CABBAGE IN THE WORLD.

We highly recommend this magnificent Cabbage, which we claim to be the finest in the world. It is medium early, short-legged, and compact, and grows to a great size, at the same time retaining all the tenderness and delicacy of flavour of the smaller varieties. First-class for the private grower or market gardener. The seed we offer, which is our own true and original stock, has been carefully grown at our Seed Grounds from the stalks of fully developed and first-class Cabbages only, and owing to the many years of careful selection will be found of an unequalled and thoroughly reliable quality. Per packet 6d.; per oz. 1s. 6d.

DANIELS' DEFIANCE. Reduced from a Photograph.

EVIDENCE OF QUALITY.

CABBAGES.

DANIELS' LITTLE QUEEN. The earliest Cabbage in cultivation. It is distinct in appearance and of dwarf compact habit, with very firm heads. A most useful variety both for Spring and Autumn sowing. Our own selected stock per pkt. 6d. . . ELLAM'S EARLY DWARF. A first-class Early Cabbage in all respects. Being very compact, they can be planted close together, thus growing double the quantity of plants on the same space than most kinds. A fine early market kind, and one of the best for Autumn sowing per pkt. 4d.

DANIELS' IMPROVED ENFIELD MARKET. A first class stock, earlier and larger than the ordinary variety FIRST AND BEST. An early dwarf Cabbage of great merit; heads very firm and compact, and of excellent quality per pkt. 4d. ENFIELD MARKET. A most useful maincrop variety; heads largo and solid, and of good flavour

EWING'S No. 1. A very fine early dwarf Cabbage per pkt. 3d.

FLOWER OF SPRING. An early variety of compact habit, heads solid and very tender. Very useful for Autumn sowing pkt. 4d.

NONPAREIL IMPROVED DWARF. Early variety, dwarf and compact; very useful for market growers per pkt. 4d.

OFFINITION. OFFENHAM. A fine variety of dwarf and compact habit, very useful; one of the best for Autumn sowing .. per pkt. 4d.

ROSETTE COLEWORT. Very hardy; the rosette-like heads grow to a nice size, and are very delicate cating .. per pkt. 3d.

ST. JOHN'S DAY. A fine, dwarf, very early variety of the Drumhead type, but much smaller and of fine quality per pkt. 3d.

WHEELER'S IMPERIAL. A fine variety of the Nonpareil type, heads very firm and of fine quality ... per pkt. 4d.

WINNINGSTADT. A most useful late variety, with pointed heads, which are exceedingly firm and keep sound a long time pkt. 4d.

CHRISTMAS DRUMHEAD. A fine dwarf compact Cablage of CHRISTMAS DRUMHEAD. A fine, dwarf, compact Cabbage of excellent flavour, of a dark green colour. A splendid variety for culinary purposes TILITY (new). A very dwarf early and compact variety for spring sowing, is of very rapid growth. Sown in March, it can be cut in July and early August per pkt. 4d. 1 0 DANIELS' EARLY DRUMHEAD. This variety does not grow quite so large as the ordinary field varieties, is of dwarf compact habit, with solid heads, and of mild flavour 0 10

[&]quot;Your Flower of Spring Cabbage were admired by all last year; this is why my neighbours want some of the same kind."—Mr. F. J. BRADDISH, Sampford.

DANIELS' LITTLE QUEEN. Reduced from a Photograp's

Cultivation.—Cabbages are without doubt the most useful and at the same time the most easily grown of our Spring and Autumn Vegetables, and can be grown without much outlay by everyone possessing a garden or an allotment. They prefer a good rich loamy soil, and being what is termed a gross feeder will respond well to good cultivation, and will repay any extra outlay in this direction, as under these conditions they will heart ap quicker and are consequently much more tender and of excellent flavour. The seeds should be sown on moderately poor soil as the plauts are thus anore stocky and hardy, and when transplanted into good soil will respond more readily to this treatment.

more reachly to this treatment.

For Summer and Autumn use sow the seed in March and for a succession in April and May if required. They are greatly improved by being pricked out into nursery beds as soon as large enough and finally transplanted into rich, well-manured soil. The smaller varieties, such as "Little Queen" and "Ellam's Early," plant out in rows 18 inches apart, and 15 inches from plant to plant; the larger and stronger growing sorts such as "Dafiance," "Enfield Market," etc., in rows 2 feet apart and 2 feet from plant to plant.

2 In the kitchen garden should occupy the moistest and coolest positions, except the early Spring kinds, which require a warm sheltered spot. The

Cultivation.—Cabbages are without doubt the most useful and at the ground should be deeply dug, plentifully manured, and kept free from a time the most easily grown of our Spring and Autumn Vegetables, weeds,

Cabbages are highly appreciated in the early Spring, and for this crop seed should be sown in the Northern Districts in July, and in the Midland and Southern Districts during August. These succeed excellently planted out on firm ground, such as an onion bed, or other ground previously occupied by surface rooting plants that have not impoverished the ground too much. Do not dig over but hee and clean before planting.

Manuring.—The hoe should be kept going every week on the beds, and an occasional application of nitrate of soda or sulphate of ammonia, at the rate of one ounce to the square yard, is recommended before the hearts form, or when procurable an occasional watering with liquid manure of medium strength will be found very beneficial.

Cutting.—A little attention in this direction will prolong the period of usefulness for this valuable crop. When cutting Cabbages do not cut off too low, always leave a few bottom leaves on the stem. The plants will then break again, producing a cluster of young succulent heads, which heart immediately and prove a very useful continuation of the crop.

[&]quot;I am now entting your Little Queen Cabbage, which was sown last August, and are very delicious."—Mr. W. DANIELLS, Derby.

[&]quot;I have had a splendid lot of Cabbage from the Seed I had from you last autumn."—Mr. J. PENTER, Polnaan.

[&]quot;Your Defiance Cabbage has done splendid with me, they were sown last autumn. I have the finest Cabbages on the field of over 100 plots,"—Mr. W. WILSON, Newington.

[&]quot;I am very pleased to inform you that I have had the finest Defiance Cabbage that has ever been grown."—Mr. J. PORTER, likeston.

[&]quot;I would like to mention that the Ailsa Craig Onion and the Defiance Cabbage I purchased from you last year have turned out very well, several of the Cabbages weighing over 10 lbs., yet having a good flavour and being very tender."—Mr. H. HOSKIN, Exeter.

[&]quot;The Defiance Cabbage Seed obtained from you last year have proved very satisfactory, everybody admires them, I can well say they all weigh over 11 lbs."—Mr. W. GLAVIN, Merthyr Tydyll.

"I have traded with you now for over 40 years. I am pleased to say everything has been true to name and description, and enabled me to win dozens of Prizes."—Mr. A. G. BARNESLY, Beverley.

"I write to thank you for sending Seeds so prompt, and to say that I have grown your seeds for over 30 years, and have always found them reliable. From your Deflace Cabtage Seed last year I grey one weighing 11} lbs. I had also a syldendid ctop of Potatoes from your Express and Duke of York."—Mr. T. TARLOW, Locce.

"It may be satisfactory to you to know that this is the 27th year I have grown Daniels' Seeds, therefore further comment is needless."—Mr. F. DEW, Derby.

"I am pleased to inform you that I took 20 Prizes at our Show this year, 10 First and 10 Second, including First Prize for best garden and the Association Medal for the most successful exhibitor. I had all my Seeds from you."—Mr. C. THCMAS, Pontrhydyfin.

"I am writing to you to tell you that I did splendid with the results of your Seeds this year. I took 12 First, 7 Second and 2 Third Prizes at our Shows. I had a very strong completition."—Mr. H. COWLEY, Westbury-on-Ttym.

DANIELS DWARF BLODD RED. Esduced from a Photograph.

CAULIFLOWERS.

DANIELS' KING OF CAULIFLOWERS.

Cultivation.—The Cauliflower is one of the choicest of our vegetables, and requires much care and very liberal treatment. Cauliflowers are very liable to bolt if any check ocens in their growth, and therefore every care should be taken that they grow on from start to finish without a break. It does not much matter whether the soil on which Cauliflowers are grown is light or heavy, so long as it is thoroughly trenched, and a very liberal quantity of farmyard manure applied. To get the earliest Cauliflowers, the seed should be sown in September in the open, and transferred when big enough to cold frames for the Winter months. Early in March select a warm border and plant them out when a very early crop will be secured.

The earliest Spring sowing should be made in February in boxes on a hotbed, and the plants moved to frames and gradually hardened so as to be ready to plant out in May. A succession of sowings should be made in March in frames and in the open during April, May, and June, so as to secure an unbroken supply. Cauliflowers are most highly prized in Autumn when the Summer crops are over, and it is as well to have more than one batch. When planting and also during dry woather, great earo should be given to watering. Frequent applications of liquid manure will give size to the heads for exhibition purposes.

Cauliflowers are particularly subject to white fly, which causes the plant to become blind, and any suspicion of this should be met with a dressing of soot upon the leaves in the early morning. The beds should be regularly gone over to ensure the heads being cut before they get too old, as they soon get past their best. For early work, Daniels' King is undoubtedly the best, followed by Dwarf Mammoth and Autumn Queen. For general crop, Autumn Giant will be found the most useful.

DANIELS' KING OF CAULIFLOWERS. earliest variety in cultivation, of very dwarf and compact habit, the heads beautifully white and of the finest texture. Seed raised in frames in February, and planted out as soon as the weather permits, will produce some fine heads in June. One of the best to sow for succession through the summer ... per pkt. 1s. 6d. and 2s. 6d. DANIELS' SNOWBALL. An invaluable early variety of dwarf compact habit, producing fine white heads of excellent quality. Ready to cut in four months from time of sowing per pkt. 1s. 6d. and 2s. 6d.

DANIELS' DWARF MAMMOTH. A very superior dwarf early variety, grows to a larger size than Daniels' King, and forms a good succession to that variety, bead larger size. a good succession to that variety; heads large, white, and compaet. Also useful for forcing per pkt. ls. 3d. ECLIPSE. This is an excellent large Autumn variety, and very useful for Market purposes. By successional sowings it can be had from August to Christmas per pkt. 1s. EARLY LONDON WHITE. Useful variety, growing to a large size, heads very white and firm per pkt. ls. SELF-PROTECTING AUTUMN GIANT. A fine late variety coming into use directly after Veitch's Autumn Giant. The heads are well-protected by luxuriant over lapping foliage. May be had in good condition up to Christmas per pkt. 1s. VEITCH'S AUTUMN GIANT. The most useful of our Autumn Cauliflowers and most valuable for general erop. It is very distinct in appearance, producing splendid large heads, beautifully white and firm, and of the fuest texture . . per pkt. 9d. WALCHEREN. Sow under glass in February, to succeed the Spring Broccoli, and in beds from May to July for succession per pkt. Is. DANIELS' AUTUMN QUEEN. A grand variety,

coming in fit for use three weeks earlier than Veitch's Autumn Giant, is very short-legged and compact; the

VEITCH'S AUTUMN GIANT.

[&]quot;Just these few lines to let you know how successful we have been in the Horticultural Shows held in the Eastern Valleys of Monmouthshire. We have taken 68 Prizes in 6 Shows out of 92 exhibits, all the exhibits grown from the Seeds obtained from you this year."—Mr. JOHN TAYLOR, Pontnewynydd.

EDWARDS, Cymmau.

[&]quot;We have taken 14 Prizes this week out of 16 lots. We shall send for more Seeds I the beginning of next year."--Mr. G. BAILEY, Brigstock.

CELERY.

Cultivation.—This very important vegetable is one that fully repays a liberal outlay both of labour and manure. Being a moisture loving plant and a gross feeder, it should, if possible, be raised in soil where, during the growing period, copious supplies of water can be applied. For the earliest crop sow the seed about the middle of February, giving some heat, and when the plants have made their seed leaves, have them pricked off into boxes or frames, giving if possible a gentlo bottom heat to keep them growing. Make a further sowing in March in a similar way, and, if necessary, another in April in an open border; these later sowings will give some useful Celery for cooking. It is an excellent plan to get the Celery trenelics ready quite early in the season, so that advantage may be taken of the first favourable showery day to put out the plants when large enough.

In pushing the trenelies throw out the soil 12 or 14 inches deep and 18 inches

DANIELS' GIANT WHITE. Reduced from a Photograph.

In making the trenches throw out tho soil 12 or 14 inches deep and 18 inches wide, and be eareful to retain the top soil so that it may be placed in the bottom of the trench; mix with it a good dressing of farmyard manure and in this mixture the young plants should be placed; the rest of the soil taken out of the trench should be piled up on the sides and used, when the time comes, for earthing up the Celery; allow a space of three or four feet between the trenches.

In planting out the Celery in the trenches, place the seedlings about nine inches apart, in a single row for the earliest crop; for the main crop they are often planted in double rows. In dry weather give liberal supplies of water or liquid nanure to keep the plants growing, as if they get a check they are liable to bolt.

It is a good plan to give a sprinkling of soot over the foliage, while damp with the early morning dew, in order to keep away the Celery fly and snails.

The greatest care should be taken in earthing up Celery. As soon as the plants are about nine inches high, go over them and thoroughly clean off all side shoots, and tie the growth loosely with Raffia. Choose a fine day, and gradually work down some of the finest soil round the bases of the plants, being most careful not to allow any of the soil to get between the leaves; do not make In making the trenches throw out the soil 12 or 14 inches deep and 18 inches

most careful not to allow any of the soil to get between the leaves; do not make the soil too hard, or it will stop the growth. Continue to earth up as the plants grow. The final earthing should form a ridge as a protection. In very severo weather it will be found an advantage to give a slight covering of straw or bracken over the top of the row.

WHITE VARIETIES. per pkt.	- s.	d.
DANIELS' EARLIEST WHITE. This fine white Celery		
has now firmly established its reputation as one of the very		
best for early work, and has become highly popular. Sown		
at the same time, it is ready for use quite six weeks earlier		
than any other variety. The heads, which grow to a large size, are very firm and solid, and of a sweet nutty flavour	1	0

DANIELG LODD DOBEDMG As and lead of per pkt.	S.
DANIELS' LORD ROBERTS. An exceedingly handsome	
variety, the result of a cross between Royal Osborne and	
Lockie's Perfection. The fruit which are longer than the	
last named variety, are of a rich dark green colour, of splendid	
shape, with no neck, and are borne in the greatest profusion.	
It is useful either for Winter or Summer cultivation.	
1s. 6d. and	2
DANIELS' LORD KITCHENER. This grand new Cucum-	
ber is one of the most prolific, bearing 4 and 5 fruit at a joint,	
and at the same time is of strong, robust constitution, pro-	
ducing a heavy crop of fine straight fruit 20 to 24 inches in	
length, with very little neck. It is a black-spined variety,	
and very handsome in appearance. A most useful variety	
for all purposes 1s. 6d. and	2
DISEASE RESISTER. A very prolific variety of similar	
type to the Amateur, but a stronger grower. The strong	
leathery leaves resisting all kinds of disease much better and	
it keeps in bearing for a long period 1s. 6d. and	2
THE AMATEUR. This can perhaps be best described as	
a very finely selected stock of The Rochford or Covent Garden	
type. It is enormously productive, bearing 3 to 4 fruit at a	
joint. The fruit, which are of handsome shape, average	
about 20 to 24 inches in length, are slightly spined and of fine	
colour 1s. 6d. and	$\frac{2}{2}$
DANIELS' IMPROVED TELEGRAPH. A great improve-	
ment on the old Telegraph, bearing clean, straight fruit twenty	
to twenty-four inches long, an abundant bearer. Our own	
selected stock, all saved from picked fruit 1s. 6d. and	2
DANIELS' DEFIANCE (early prolific). A variety of hardy, robust	
constitution, producing in great abundance very short-necked and	
elegant fruit of a rich dark green colour, from eighteen to twenty-four	
inches in length, straight and uniform	1
DANIELS' DUKE OF ALBANY. This is the finest Cucumber ever intro- duced for exhibition, having obtained numerous First Prizes. The	
fruit are long, straight, and of a beautiful dark green colour, very hand-	
some, and of the finest quality	1
fine, robust constitution and habit, its fruit growing rapidly to the	
law of the of thinter to thinter our inches	1 (
EVERY-DAY. This fine Cheumber is of medium size, the fruit being dark-	
skinned, very handsome in shape, most prolific, and of splendid flavour. First Class Certificate, R.H.S.	1
THE ROCHFORD. A most prolific bearer. The fruit are slightly spined,	1
eighteen to twenty inches in length, of a beautiful fresh green colour,	
and of the most handsome form	1 (

DANIELS' PERFECTION RIDGE. The longest and best	
out-door variety in cultivation, is very hardy and prolific,	
bearing a heavy crop of nice shaped fruit, averaging fifteen	
to twenty inches in length and of superior flavour 6d. and 1	0
JAPANESE CLIMBING. A most useful variety for growing on trellis work,	
&c., being very ornamental. It produces a good crop of fruit, averaging	
from ten to twelve inches in length 6d and 1	()
LONG PRICKLY. A very nseful variety of fine flavour 0	
SHORT PRICKLY. Very hardy, fine for pickling 0	6
STOCKWOOD. Fine selected stock	
PROLIFIC PICKLING. The most prolific out-door variety; very hardy 0	Ü

CRESS.

CRESS, GROWING IN BOX.

Cultivation.—Cress is one of the most useful salads grown, and it is quite easy to keep up a continual supply, as no expensive appliances are needed. If a greenhouse is available, fill boxes with good soil to within about half inch of the top, pressing the soil firmly, then sow the seeds thickly and evenly but do not cover them with soil. Put the boxes in a dark place and give a good watering; in about a fortnight the cress will be ready to eat. By repeating this process a succession can be maintained throughout the early Spring.

During Summer a shady border should be selected, and the soil raked fine and pressed firm. Sow the seeds and press down with a board, giving good waterings and protection with mats until the seed has germinated. To keep up a constant supply a sowing should be made every week.

American or Land Cress is most useful for mixed salads, and is quite easy to grow; sow the seeds from March onwards on a north border and

thin out to allow about four inches between each plant, using the outside leaves only.

Water-cress can be grown in ordinary garden soil provided a shady border is chosen and copious waterings given. The seed should be sown in April, and the plants thinned out, leaving about six inches between each. Keep the plants pinched to prevent them from flowering. In Autumn fill pans half full of soil and place some of the plants therein. Put them in a greenhouse and keep thoroughly watered, and a supply of good tender Water-cress will be available all the Winter.

ENDIVE.

Cultivation.—A deep and rich soil is the most suitable for growing good Endive, and abundance of water should be given in dry weather. For early use, sow under glass or on a warm border in April, and make successive sowings at intervals of about three weeks. The best Endives are however grown in Autumn, and for these a first sowing should be made early in July, and successional sowings to the end of August. For these later sowings select a warm, sheltered position, a south border that has carried a crop of early Potatoes or Peas being very suitable. Sow in shallow drills about one foot apart, and transplant or thin out nine inches or one foot apart in the row. The broad-leaved varieties are best blanched by tying, but the finer curled-leaved sorts should have inverted flower-pots placed over them, with the holes stopped, or they may be blanched by pieces of slate being haid on them, and by other similar methods. Blanching takes about ten days, and only sufficient should be done at one time to meet requirements. The latest crops may be stored at the end of October for Winter use, in cool pits or frames, where protected from frost, and by this means may

be had in use till Spring Lettuces make their appearance.

"Your Seeds have always given entire satisfaction, but I have no hesitation in saying last year's supply exceeded every other, and am hoping to do much larger business when I can procure suitable land near home."—Mr. A. STEGGLES, Dalston.

INDIAN SUGAR CORN OR MAIZE.

This is now being largely grown in this country as a vegetable. The cobs or heads should be gathered when just passing out of the milky state; if boiled and served up like asparagus are a great delicacy. Sow in April in a gentle heat, grow on in pots and plant out in June three feet apart. It is at the same time a most graceful plant in the garden.

- "I should like to say that the Seeds did excellent last year, the hest I have ever had." Mr. H. PEARSON, Kidderminster.
- "It might interest you to know that I am running Daniels' Seeds only this year for exhibition; last year I took Six Prizes, all grown from Daniels' Seeds,"—Mr. C. BAILEY, Ecclesfield.
- "We are highly satisfied with Seeds supplied by you last year." Mr. H. CLARKSON, Goole
- "I must thank you for the care you have always taken in selecting Seeds, which I have always found of perfect quality."—Mr. B. HUGHES, Ardglass.
- "I beg to acknowledge the receipt of Potato Seed, and am most pleased with them. The Shallots and other Seeds you sent me are also of flue quality."—Mr. S. GOODACRE, Chingford.

[&]quot;No doubt you will be pleased to know that last year I took ten Prizes out of fourteea exhibits and four highly commended with stull grown from your Seeds."— Mr. H. JESSOP. Loudon, E.4.

[&]quot;May I add that I got all my Spring Seeds from you, and the gardener calculates that ninety-seven per cent, came up and all have done well and are most prolific."—Mrs. RIMINGTON, Bideford.

[&]quot;I am pleased to inform you that I won First Prize at our Show last August for collection of vegetables, for which you offered the Prizes; the produce was all from your Seeds. I might add that I also won First Prize for a collection of vegetables open to the whole district, as well as Eleven other Prizes."—Mr. C. W. SALTER, Freshwater.

Reduced from a Photograph.

LEEKS.

Cultivation.—The Leek is one of the most nutritious vegetables cultivated, and although to produce exhibition specimens much care and attention is needed, still a thoroughly good crop for cooking purposes can be grown quite easily. Leeks are gross feeders and therefore require well tilled and liberally manned ground; the best plan is to give the land a thorough dressing of well-decayed manure in Autumn and trench it deeply, allowing it to remain rough for the Winter. The seed should be sown in drills in March for the main crop, and care must be taken to keep the ground thoroughly clean from the outset in order to give the seedlings a good start.

The easiest mode of culture is to dibble the young plants when about six inches high into holes made about twelvo inches deep, giving occasional dressings of liquid manure. In September draw the earth round the plants, It is best to defer using Leeks till as late as possible in the Autumn, as the flavour improves.

When it is desired to grow Leeks for exhibition, a good plan is to grow them in trenches in the same way as Celery, allowing two feet between the trenches; for this purpose the seed should be sown on a gentle hotbed in February, and the seedlings pricked off into boxes when big enough; it is important that the young plants be thoroughly hardened, as they will not stand coddling, but cold draughts should be avoided. When the plants have made about six inches of growth, plant them into trenches, allowing about 15 inches between each plant; lift the plants out of the box with a trowel, to ensure getting a good let of roots. As the plants grow, the soil must be carefully and firmly worked round the roots, and this process continued all the Summer at intervals, giving frequent waterings of liquid manure. Some growers place collars of brown paper round the stems before commencing to earth up the plants as this excludes all light and is a great aid to blanching.

There is every encouragement to grow Lecks to a large size, as the flavour of the finest specimens is superior to the smaller ones. This is not so in most vegetables, but is certainly the ease with Lecks.

per oz s.	(La
DANIELS' CHAMPION. This is undoubtedly one of the finest	
Leeks in cultivation. It grows to a large size, and is unsurpassed	
for exhibition purposes, having produced specimens with 18 inches	
of blanched stem, and of perfect shape. It comes early into use,	
and is of exceptionally mild flavour. It has obtained First Prize at	
a great number of Shows on account of its extraordinary clearness	
of skin and handsome appearance. We strongly recommend this	
variety to intending exhibitors, as one likely to give the greatest	
satisfaction per pkt. 1s. 2	6

Cultivation. The Common or White Mustard is much used for saladings, and is generally used with Cress. Out of doors, any cool, moist place is suitable for sowings, which should be made at regular intervals during Spring and Summer. When sown under glass in Winter and early Spring, no better way exists than that recommended for Cress.

EVIDENCE OF QUALITY.

"The Seeds I had last year proved satisfactory. I am pleased to tell you I took twenty-five Prizes at our local Show, mostly with produce of your Seeds, in open Amateur and Cottagers' Classes. I took premier honours in classes mentioned with your Distinction Pea, and they commanded admiration of the whole public."—Mr. W. WITHINGTON, Shifnal,

"You may be interested to know I took three First Prizes and Challenge Shield at an open Show, all Vegetables, etc., grown from your Seeds "-Mr. C. DIVER, Merton.

Cultivation.—Thore are few vegetable crops upon which so much care is expended as the Onion, and during recent years its culture has received much more attention than was formerly the case. When the seed can be raised in January in heat (thereby obtaining an early start) it is possible to grow bulbs of equal size to those grown from seed sown the previous Autumn; ahout the last week in January is the time for the earliest sowing.

Sow the seed in hoxes or pots in fine soil, a good mixture being two parts of good loam to one part of decomposed manure, or leaf soil. When the young plants are about three inches high prick them off into hoxes, and give all the light possible, gradually admitting air, and hardening as the days lengthen, until the time arrives for planting out in the beds about the middle of April. The earliest sowing out of doors should be made in February and the main sowing of all kinds in March.

The greatest care should be taken in preparing the Onion hed, the ground heing thoroughly raked over, all the stones cleared off, and a perfectly fine surface obtained and the soil made quite firm. Sow the seeds very evenly in shallow drills about eighteen inches apart and carefully cover the seed by putting the soil from the side of the drills with the feet. The whole bed should then he well trodden down hoth down the hed and across as well, after this again rake the soil level and little further work is necessary heyond keeping the hoe going and thinning out the plants when the time arrives. Unless specially fine bulbs are required it is not advisable to thin too much. To prevent an attack of Onion Maggot in a dry season, a good watering with line water will be found to be of much service.

with lime water will be found to be of much service.

Creat care is necessary in harvesting the Onion crop. It is a good plan to bend over the tops of the plants in August by going over the plants individually, this will assist the ripening of the hulbs. Onions require to be thoroughly ripened before being taken off the ground and should, therefore, be pulled about the middle of September and turned over on the ground every two or three days for a fortnight, when they should be gathered into an airy shed in readiness for roping together, this being the hest method of storing them for Winter use.

"My crop of Onions last year from your Golden Globe Seed was all that could be desired."—Mr. D. CHAPLIN, Hayerhill.

[&]quot;I have grown your Onion, Golden Globe, for several years now, and have had a splendid bed again this year. It is a fine keeper, of good shape and good quality."—Mr. A. WOODHOUSE, Letheringsett,

[&]quot;It may interest you to know that I took First Prize at the Sudbury and Wembley Show with nine Golden Rocca Onions."—Mr. ROWLAND LANE, Wembley.

[&]quot;I had quite a nice crop of Onions from the Autumn sowing this year; all the crops are very good."—Mr. J. SIMMONDS, Ventnor

ONIONS FOR AUTUMN SOWING.

DANIELS' GOLDEN ROCCA. Reduced from a Photograph.

DANIELS' GOLDEN ROCCA. One of the largest and finest Onions ever introduced. Fine globular shape, golden yellow skin, mild flavour, and with careful cultivation comes equal to the imported Portugal Onions, and keeps sound till June. This variety is the best exhibition kind known, and has obtained more Prizes than any other Onion. If sown in Autumn, and kept under first-class cultivation, will grow bulbs two to three pounds each; may also be sown in Spring, and will pro-Per packet 1s.; per ounce 2s. 3d. duce some fine bulbs.

PLANTS.

Strong Autumn sown, to plant out for show purposes, can be supplied in Spring of the following kinds only .-Ailsa Craig, Golden Rocca, Giant Rocca, White Elephant Tripoli, each sort 2s. 6d. per 100. All Carriage Paid

The Autumn sowing of these, which offers many advantages to the cultivator, has very much grown in favour of late years. When sown in Autumn, Onions grow to a much larger size, and are milder in flavour than those sown in Spring, especially when transplanted, and being much less liable to attack from fly, are rarely destroyed by maggot. They are besides exceedingly valuable for the supply of fresh green Onions in early Spring which can always be relied on.

Cultivation.—For securing specially fine Onions there is no doubt that it is much better to sow the seed in the Autumn. The ground should be prepared as for the Spring erop, except that the drills should be made a little deeper. Sow the seed any time from the middle of July to the end of August and treat in the same manner as advised for Spring sowing. Keep the ground clear of weeds, and give good soakings of water, if the Autumn is a dry one. If eooking size only is needed it will merely be found necessary to thin out the Onions and a good erop will be obtained, but if exhibition bulbs are required, the strongest must be selected in Spring, lifted earefully with a trowel, and transplanted nine inches apart on to a specially prepared bed of rich soil. Water thoroughly, at the same time making the soil firm round the bulbs. Keep the hoe going and excellent Show specimens should be produced. A sprinkling of nitrate of soda (about a pound to the rod) in May or June, between the rows, is also very stimulating to the growth. Daniels' Norwich Fertilizer, applied at the rate of 4 ozs. to the square yard, in April or May, is also a first-class manure and is highly recommended. Soot is also an excellent etimulant for onions; a light dressing about once a fortnight will add considerable bulk to the erop. This should be applied in damp weather if possible.

PARSLEY.

DANIELS' OUEEN OF THE DARSLEVS CROWING AT OUR CEED

Time a recognition of the rander of the state of the stat							
DANIELS' QUEEN OF THE PARSLEYS. An extra selected stock carefully grown on our own Seed Farm. The							
most useful for garnishing, and extremely valuable as an ornamental plant for the flower-border per pkt. 6d. 1 6	;						
GIANT CURLED. A very handsome variety, leaves finely curled, grows to a large size, and is very ornamental; this is							
the best sort to grow where Parsley is required in large quantities per pkt. 4d. 1 0)						
COVENT GARDEN GARNISHING. A splendid variety, beautifully curled							
EXTRA-FINE CURLED. Fine for garnishing	2						

Cultivation.—Parsley being a deep-rooting plant pays well for liberal cultivation; it likes a good rich soil in a cool but not too shady position. Parsley is often grown as an edging to other kitchen garden crops and has a pleasing effect when thus used, and as it is in demand the whole year round it is an excellent plan to make a succession of sowings during the year to ensure a continuous supply. Make the first sowing in a box in February, and when the plants have been gradually hardened off they should be planted out during April in the permanent border, allowing about twelve inches between each plant. Another sowing at the end of March will be of value for a succession.

For a Winter supply, a sowing should be made in June or July, choosing a sunny aspect on a south border. The plants should be thinned out to prevent over-crowding; those taken out may be potted up and placed in a cold frame or greenhouse and will yield an excellent supply of leaves for Winter garnishing. In the event of severe weather it will be found advisable to cover the outside beds with mats or an old frame, and a sprinkling of soot in the early marging during the growing season will be found to have an excellent effect.

soot in the early morning during the growing season will be found to have an excellent effect.

HERBS (Sweet and Pot).

ANGELICA. The mid-rib may be eaten as Celery, or when candied makes an excellent confection.

ANISE. The seeds are much used for medicinal purposes; the leaves

BALM. For making balm tea, which is invaluable in eases of fever;

BASIL, Bush. The leaves and tops impart the flavour of Cloves to soups,

and are much used for seasoning.

* BASIL, Sweet. For flavouring salads and soups.

* BORAGE. The young leaves used as salad or pot herb

BURNET. The young leaves have the flavour of Cueumbers.

CARAWAY. For flavouring soups.

CHERVIL. Very fine for salads.

CORIANDER. The tender leaves are used for soups or salads.

DILL. The leaves are used in soups, sauces, and pickles.

FENNEL. Used in sauces for fish and for garnishing.
HOREHOUND. Makes an esteemed well-known beverage.
HYSSOP. Young shoots used as pot herbs.
MARIGOLD, Pot. The flowers impart a beautiful colour to broths and soups.

- * MARJORAM, Sweet or Knotted Aromatic and sweet flavour, used in MARJORAM, Pot soups and stuffings. soups and stuffings.
- LAVENDER. Cultivated for its flowers, which are very aromatic.
- * PURSLANE, Green The shoots and succulent leaves are cooling when used in Spring as salads.

 ‡ RAMPION. The leaves used as salads; the roots, which have a pleasant
- nutty flavour, used as Radish.
- ‡ ROSEMARY. The leaves make a drink esteemed for relieving headache. ‡ RUE, Broad-leaved. Leaves used medicinally; also used as a remedy for eroup in fowls.
- SAGE. Used in stuffing and sauces.
- The tops being very aromatic are used in salads and soups; they improve the flavour if boiled-* SAVORY, Summer with Peas or Beans
- SORREL, Broad-leaved The leaves are used in salads, soups, and SORREL, Lettuce-leaved sauces.
- THYME. Broad-leaved. Used in stuffings, soups, and sauces.
- t WORMWOOD. Fine tonic when taken as tea; and imparts bitterness. to drinks.

PARSNIPS.

DANIELS' IMPROVED HOLLOW-CROWNED. Reduced from a Photograph.

suitable. Have the ground thoroughly trenched (at least two feet deep) in the Autumn, and give a good dressing of farmyard manure, leaving it rough for the Winter. Early in February the bed should be levelled, forked down, and the seeds sown in drills about 1½ feet apart; thin the young plants out to about 12 inches apart as soon as it is possible to handle them, and be sure to keep the ground thoroughly clean between the rows by frequent hocing. When specimen roots are being grown for exhibition, holes should be bored three or four feet deep with a crowbar, and filled with carefully mixed soil, leaf mould, and wood ashes; sow four or five seeds in each hole and thin out the plants, leaving one to each; weed the ground carefully and apply

a sprinkling of soot to keep away pests.

Parsnips are always better when allowed to remain in the ground and lifted when required for use, but when it is necessary to lift and store them, they should be placed in dry sand in a dark shed or cellar.

SPINACH.

Cultivation.—All kinds like a good rich soil; for the Summer Spinach select a warm border and sow the seeds in rows, where a little shade can be given; it is often grown between the rows of Peas and Beans. It is important that the plants should be thinned out so as to allow plenty of room for each to develop, and that the crop should be kept well gathered while young.

Winter Spinach should be sown in July or August in drills one inch deep, and twelve inches apart in a well-drained border, care being taken to thin out well, otherwise the leaves will decay, as they will also if grown on heavy, water-logged soil. New Zealand Spinach is a useful vegetable for the Summer, but will not stand the frost. Sow it on a warm border in April, and thin out the plants to about two feet apart.

[&]quot;I received the Seeds quite safe and was very pleased with them, many thanks for prompt delivery. I bave dug a Parsnip grown from your Seed 18 ins. in of cumference and several at 12 ins."—Mr. A. W. HOGBEN, Folkestone.

[&]quot;I have received voucher for First Prize, awarded at the Horticultural Show last August. The Seed I had gave great satisfaction. I won thirteen Prizes altogether."—Mr. H. BOLSTRIDGE Stockingford.

[&]quot;I wish to inform you that since I have been supplied with your Seeds we have had splendid specimens, both flowers and vegetables for which we have had great praise."—Mrs. M. SMITH West Malling.

[&]quot;I am pleased to inform you that I was very successful with your Seeds last season They enabled me to obtain Prize for best allotment, also seven First and four Second Prizes for Vegetables, and Challenge Cup for highest number of points at our Show "—Mr. G. GILLHAM Manor Park

RADISHES.

WHITE TURNIP.

DANIELS' BEST OF ALL. FRENCH BREAKFAST.

DANIELS' EARLY SCARLET TURNIP,

LONG VARIETIES.

	DANIELS' BEST OF ALL. A new and distinct	
	long variety; colour, beautiful bright scarlet, flesh	
	pure white, very tender and crisp. It comes into use	
	very early; and will be found a most useful variety,	
	its bright colour making it very attractive both for the	
0 8	table and market purposes per pint 5s. 6d.	
	DANIELS' LONG WHITE. A new variety of	
	excellent quality. It is the same shape as the Wood's	
	Frame, and pure white in colour. The flesh is exceed-	
	ingly firm and crisp, and it keeps solid and in good	
0 8	condition a long time per pint 5s. 6d.	
	NIELS' LONG SCARLET. A fine select Stock, beautiful colour,	DA
0 6	and very crisp, best for general crop per pint 4s. 0d. DOD'S EARLY FRAME. The best for early crop, forces well	327
0 6	per pint 4s. Od.	AA.
	ARLET SHORT-TOP. Best for general crop and market purposes	SC
0 6	per pint 4s. 0d.	

OLIVE-SHAPED VARIETIES.

FRENCH BREAKFAST. Scarlet, tipped white, oval shaped, forces		
well, mild and crisp; useful market variety per pint 4s. 0d.	0	6
OLIVE-SHAPED SCARLET. Early, good forcer, very tender and		
mild per pint 4s. 0d.	0	6
OLIVE-SHAPED WHITE. Of quick growth, mild and erisp, hand-		
some shape per pint 4s, 0d.		
OLIVE-SHAPED MIXED per pint 4s. 0d.	0	6

TURNIP VARIETIES.

DANIELS' EARLY SCARLET TURNIP. A very early variety, the roots are firm, solid, and of true globular shape. Colour, rich glowing crimson scarlet. This is unquestionably the earliest forcing Radish extant. It grows very rapidly, is of delicate flavour, and is fit to use in three weeks from time of sowing per pint 5s. 6d. 0 8

SPARKLER (new). A quite distinct variety, the upper half of the root is bright scarlet and the lower portion pure white. The two colours are sharply defined and do not merge into each other. Has a most dainty appearance on the table ... per pint 5s. 6d. 0 8

TURNIP, Scarlet, White-tipped. Delicious and handsomo per pint 4s. 0 6

TURNIP, Scarlet For Summer and Mixed Autumn use per pint 4s. 0 6

WINTER RADISHES.

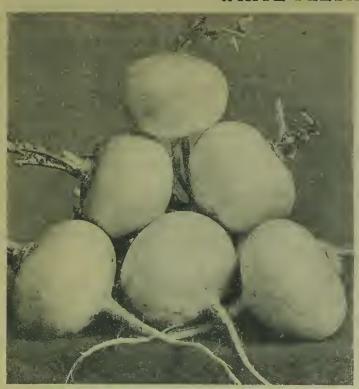

CHINESE ROSE-COLOUR for Winter use				8
BLACK SPANISH. For				

Cultivation.—The Radish is one of the most popular of all salads, and to be erisp and mild in flavour should be quickly grown. It requires a good rich soil and liberal supplies of water during hot dry weather. Care should be taken in making the sowings to ensure a continuous succession rather than a great quantity at one time. The earliest sowing (for which our new variety, "Best of All," is most suitable) should be made between the rows of early Potatoes or other vegetables grown in frames on the hot-bed. Be sure to admit plenty of air as they will not bear excessive heat.

From February onwards sowings may be made about every fortnight in a warm sheltered bed out of doors, making provision for covoring the beds with mats or straw on cold nights. This covering must always be removed in the day-time. It is most important, however, that protection from birds be made in the day-time, and fish netting is generally used for this purpose. In the middle of Summer a north-east border will be found a most suitable position for Radishes. Sow the seed broadcast and evenly, so that they are not too crowded. For Winter work the varieties "Chinese Rose" and "Black Spanish" are the best; they should be sown in August and the plants thinned out about four inches apart.

GARDEN TURNIPS.

WHITE-FLESHED VARIETIES.

DANIELS' IMPROVED SNOWBALL. Reduced from a Photograph.

YELLOW-FLESHED VARIETIES.

per pint 4s. 0d. 0 6
per pint 4s. 0d. 0 6 GOLDEN BALL. Fine stock ORANGE JELLY. Fine for late sowing

Cultivation .- This most wholesome vegetable is a lover of moisture, and to be crisp and juiey (as it should be) must be grown quickly and not checked in its growth. Choose good rich soil which has been dug over some time previously, and if possible, in a slightly shady position, as during the Summer months Turnips become stringy and hard if exposed to the

For the first crop sow Daniels' "Snowball" on a very warm border carly in March, and a succession of varieties onwards until July. Thin out the plants when in the seed leaf, leaving the single roots twelve inches apart. Give occasional dustings with wood ash and soot in the early morning to ward off the deadly Turnip fly.

For Autumn and Winter use sow in August and September either breadcast or in rows. Keep the hoe going and all weeds cleared off to besten the growth and ensure crisp tender roots.

hasten the growth and ensure crisp tender roots.

GARDEN SWEDE.

Sow in July in rows about 15 in. apart, and thin out to 9 in. apart in the row. A valuable crop for Winter use. They are highly nutritive and much superior to ordinary Turnips. Per oz. 6d.; per pint 3s. 6d.

DANIELS' IMPROVED SNOWBALL. An early and	-5.	u.
distinct variety of perfect shape, having only a single		
tap root. It is small, very solid, sweet and crisp, and		
of remarkably quick growth, flesh snow-white and		
juicy, one of the very best for exhibition purposes,		
having obtained numerous first prizes per pint 4s. 6d.	0	S
DANIELS' GREEN TOP STONE. One of the most		
useful varieties for late sowing, being very hardy will		
stand well into the Winter. The roots are of splendid		
shape, and the flesh firm, crisp, and juicy per pint 4s. 6d.	0	8
EARLY WHITE MILAN. Of similar shape and quality to the Red-		
top Milan, quite as early, but pure white in colour	0	8
CHIRK CASTLE (Black Stone). Very hardy, one of the most useful

DANIELS' GREEN TOP STONE.

SALSAFY.

SANDWICH ISLAND MAMMOTH. Splendid variety per pkt. 6d. 1 6

SCORZONERA

RUSSIAN IMPROVED ... " 4d. 1 0 COMMON ..

Cultivation.—Salsafy is a vegetable which deserves to be more grown, as it has quite a rich and distinct flavour. Being a deep rooting plant, it must have well-worked land. The seed should be sown early in May in drills about fifteen inches apart, and the plants thinned out to about nine inches in the row. If specimen roots are desired for exhibition, they may be grown in boles made by a crowbar and filled with fine soil as recommended for Parsnips and Bectroot; a liberal supply of water should be given in dry weather and the soil kept loose between the rows by hocing during the Summer. Salsafy should be lifted and stored in dry sand in a cellar for Winter use.

Scorzonera is a vegetable resembling Salsafy, being purple in colour. It requires similar treatment, but is somewhat hardier and requires a little more space in the drill.

TOMATOES.

DANIELS' LEIGH PARK.

- "I have got a splend'd crop of Ailsa Craig Tomaties, they are a very good qual ty and an exceedingly good size."—Mr. W. PLUMB, Lencester.
- "I am pleased to tell you I have got the finest Tomato you ever saw, Ailsa Craig, 25 on a bunch."—Mr. W. FRIEND, Tostock.
- "The Seeds I revelved from you last year were fine, they turned out wonderfully well, and I was more than delighted with them."—Mr. E. RODENHAM, Upper Gornal.
- "I took nine Prizes out of twelve entries with your Seeds in Southall Show last year."—Mr. J. WOOSTER, Southall.

- DANIELS' KING GEORGE V. This grand variety introduced by us some time since has proved itself one of the most useful sorts for all purposes. It is of strong constitution and a free setter. The fruit, which are of a rich glowing scarlet colour, are of perfect shape and of excellent flavour. For exhibition purposes it will prove a great acquisition
- bearing a heavy crop of fine shaped, grand coloured fruit, which are produced in great ropes and trusses. It is a very free setter, bearing up to eight and ten bunches on a plant. A good sort for pot culture and exhibition

KONDINE RED. A fine Tomato for early crop, and one that has become highly popular amongst market growers. The plant is of good constitution, producing a very heavy crop of grand shaped fruit, of pleasing colour and superb quality, and a most useful variety for all purposes. Succeeds well in the open ground

WINTER BEAUTY. A grand variety for growing under glass in Winter, it is of good strong constitution and an abundant bearer. The fruit are smooth and of a good deep colour and very firm. The quality is excellent. Also a useful sort for the open ground

Cultivation.—One of the chief things which has contributed to the great popularity of the Tomato is the fact that it is so very easily grown. It is now generally recognized that Tomatoes can he quite successfully cultivated without such heavy dressings of manure as were used at one time, although there are certain periods when good liheral dressings of manure are necessary; but when the plants are young they do not need it.

time, although there are certain periods when good liheral dressings of manure are necessary; hut when the plants are young they do not need it.

For the earliest Spring crop the seed should he sown in January or early in February in pots or pans of light rich soil, and these should be placed on a shelf in the greenhouse; the vessel should he covered over with a sheet of glass to hold the moisture and kept at an even temperature until the seed has germinated. As soon as the plants have formed the seed leaf, have them potted off singly into three-inch pots and grow them on in a warm house, potting on into six-inch pots later, in which size they should remain until permanently planted out in the horders, or potted into the fruiting pots.

Many people prefer to grow their early crops in pots ten inches to twelve inches in diameter, claiming (we helieve rightly) that they are hetter able to attend to the careful watering of the plants and thus avoid any injury to the roots. The treatment of young Tomato plants is pretty much the same as would be given to early Cucumbers, they should have a temperature of 60° during the day, and not less than 50°—55° at night. For a main crop sow the seed in Fehruary or March, then transfer into pots as hefore advised; it is of great importance that the plants be kept sturdy and therefore air should he given on all favourable occasions. The drainage of both the pots in which the young plants are grown ou and the horders or boxes in which they are to fruit should be very carefully looked to, so as to allow of their receiving copious supplies of water, especially during the fruiting period. When planted out in the greenhouse horder, the plants should he placed about 18 inches apart and supported either by means of a stake or tied up with soft string to the roof, all side growths should he cleared off as they appear, and only the main stem allowed to grow away, this being stopped when it reaches the glass, or when three or four trusses of fruit have heen set.

The best soil for Tomatoes is a good rich loam to which has been added a light dressing of farmyard manure, say one-fifth of the bulk; many growers do not put any manure in the soil at the time of planting, leaving the feeding until the first truss of fruit has set, when they apply regular dressings of artificial manure, or give a mulching of well-decayed manure and water the same thoroughly in. In no case must the manure used be taken from a heap that is heated or the result will be disastrous.

TOMATOES—RED VARIETIES.

THE DANIELS. The fruit are of good size, rather	EARLY DAWN. The earliest Tomato we know, produces

are often planted on old heaps of refuse, etc. It is not, however, essential that they should be planted on manure heaps, as they will grow quite well in the open garden in a hole which has been well manured, and in fact, they continue to fruit longer when so grown.

Copious supplies of water are necessary for Vegetable Marrows, and the fruits should be cut when young, as otherwise they become tough, and the plants cease bearing sooner. Sow the seeds singly in small pots, and plant out when about a foot high, giving protection for the first few nights. Another plan is to sow the seeds in the mound, where they are to grow, and to cover the plants with a hand-light, or some similar covering until frost has disappeared. Frequent waterings with liquid manure at the time of fruiting will add much vigour to the plants and size to the

POTATOES.

FIRST EARLY VARIETIES.

DUKE OF YORK. Reduced from a Photograph.

DANIELS' DUKE OF YORK. This grand variety still holds its own as one of the best heavy cropping Earlies in cultivation. In habit of growth, it is very compact, the haulm being only a foot high. The leaves are smooth and of a rich glossy green colour, whilst the tubers cluster compactly round the stem, and are very easy to raise. The tubers are large, oval, smooth and handsome, and distinct in appearance, the eyes are few and quite even with the surface. ensuring a minimum of waste; the flesh is dry and mealy when cooked, and of the most excellent flavour. (Originally raised Scotch grown Seed. Per 14 lb. 7s. 6d.; 56 lb. 27s. by us and sent out in 1893.)

SPECIAL NOTICE.

CARRIAGE OF POTATOES.

We pay earriage on a Potato Order when, either by itself or including other seeds, it amounts to 40/- and upwards. In the case of smaller orders we have, according to Railway regulations, to pay carriage in advance on all passenger parcels, and we therefore append a table giving such approximate charges, which amount should be added when remitting to the price quoted for the potatoes.

	. 28 lbs.	lills.		7 lb9.
Up to 30 miles	 1s. 9d.	 1s. 4d.		ls.

ARRAN ROSE (New and Immune). A useful early variety, tubers oval in shape, with pale pink skin, shallow eye, and white flesh. It is of robust constitution, with medium haulm; cooking quality excellent.

Scotch grown Seed. Per 14 lb. 7s.; 56 lb. 24s.

DARGILL EARLY (New and Immune). This new early has been tested at Ormskirk and proved itself immune from Wart Disease. It is a white kidney with shallow eyes and pale yellow flesh, the haulm is medium and somewhat spreading. A very good cropper.

Scotch grown Seed. Per 14 lb. 6s. 6d.; 56 lb. 22s.

WITCH HILL EARLY (New and Immune). A beautiful, early White Kidney of heavy cropping qualities. The eyes are shallow, flesh white, and of excellent table quality; haulm medium. First-class Certificate, R.H.S.

Scotch grown Seed. Per 7 lb. 4s. 6d.; 14 lb. 8s.

MYATT'S ASHLEAF, IMPROVED. This will be found a heavier and more reliable cropper than the old variety, and of exceptionally good table quality.

Per 14 lb. 7s. 3d.; 56 lb. 26s.

SIR JOHN, LLEWELYN. This splendid White Kidney, in consideration of its carliness, heavy cropping, good quality, and disease resisting properties, has become highly popular. The tubers are of good size and shape, and when cooked, white and floury. Award of Merit, R.H.S.

Scotch grown Seed. Per 14 lb. 6s. 3d.; 56 lb. 22s.

EPICURE. A useful early white round potato of exceptionally heavy cropping qualities, and is at the same time a most excellent table variety.

Scotch grown Seed. Per 14 lb. 5s. 9d.; 56 lb. 20s.

ARRAN COMRADE (Immune).

ARRAN COMRADE (Immune). A fine second early variety with white skin and flesh; it is oval to nearly round in shape, and of fine appearance; in fact one of the handsomest potatoes of recent introduction. The foliage is broad and spreading. It is an excellent cropper, having proved one of the best at the Ormskirk trials. If sprouted will come fit nearly as Scotch grown Seed. Per 14 lb. 6s. 6d.; 56 lb. 22s. soon as the first earlies. We can strongly recommend this variety.

EDZELL BLUE (Immune). An early coloured round variety, eyes medium depth, skin reddish purple, flesh pure white, and of excellent table quality. The haulm is vigorous, somewhat spreading, bloom white. Crops heavily, quality very good when matured. Matures rather too late to be strictly classed as a first early.

Scotch grown Seed. Per 14 lb. 5s. 6d.; 56 lb. 19s.

BRITISH QUEEN. A second early variety of great merit. The skin and flesh are white, and of extra fine table quality; this, combined with its great productiveness and good keeping qualities, make it a most desirable variety for all Scotch grown Seed. Per 14 lb. 5s.; 56 lb. 17s. purposes.

KING GEORGE V. (Immune). A most useful early Main Crop variety, which we have grown for the past threeseasons, and can thoroughly recommend. It is a handsome White Kidney, of vigorous constitution, producing a very heavy crop of large, clean tubers, with white skin and flesh, and a finely-netted skin, a sure indication of its good cooking qualities. Scotch grown Seed. Per 14 lb. 5s. 3d.; 56 lb. 18s. A most useful sort for exhibition purposes.

KING GEORGE V. A good vigorous stock. Class II. Seed. Once grown from Scotch Seed.

Per 14 lb. 4s. 9d.; 56 lb. 16s.

[&]quot;The Sensation Potatoes I had from you last year were very satisfactory, and quite came up to all that was claimed for them, the flavour particularly being quite distinct."—
Mr. R. EVERETT, Bromley.

[&]quot;I have pleasure in informing you that I had a good crop of Sensation Potatoes from Seed supplied by you last year,"—Mr. J. BROWN, Swanage.

[&]quot;The last year's Potatoes I had from you I wish to express my entire satisfaction both with the quality and results. Your Lochar and Sensation were most excellent, and were much admired by my friends."—Mr. W. W. ARNSLEY, New Southgate.

[&]quot;I am very pleased with the Seeds I had from you last year; all turned out well, especially the 11 lbs. of British Queen Potatoes."—Mr. A. TREE, Upper Killay.

MAJESTIC (Immune).

MAJESTIC.

MAJESTIC (Immune). A fine Main Crop Kidney which has proved itself one of the heaviest croppers amongst recent introductions. The haulm is of medium height and moderately vigorous, flowers white. It is kidney shaped, with shallow eyes. Skin and flesh white, and of the most excellent table quality. Can be highly recommended.

Scotch grown Seed. Per 14 lb. 6s. 3d.; 56 lb. 22s.

MAJESTIC. A good vigorous stock.

Class II. Seed. Once grown from Scotch Seed. Per 14 lb. 5s. 9d.; 56 lb. 20s.

LOCHAR (Immune). A late white-skinned variety, roundish in shape; eyes medium depth; skin white with faint tinge of pink, flesh white and of excellent quality. Haulm upright, spreading, moderately vigorous. Produces a heavy crop of medium sized tubers of good appearance and fine table quality. Flowers creamy white.

Scotch grown Seed. Per 14 lb. 5s. 3d.; 56 lb. 18s.

TINWALD PERFECTION (Immune). A fine late variety; the tubers, which are of white skin and flesh, are very handsome, and oval to oblong in shape. The haulm is of medium height, spreading and moderately vigorous; leaves darkish green, flowers mauve, tipped white. On account of its handsome shape will prove a valuable sort for exhibition. Scotch grown Seed. Per 14 lb. 5s. 3d.; 56 lb. 18s.

KERR'S PINK (Immune). A late pale pink round potato of vigorous constitution, with strong upright haulm and white flowers. It is an extraordinary heavy cropper, flattish round in shape, white flesh, and of excellent cooking quality. Scotch grown Seed. Per 14 lb. 6s.; 56 lb. 20s. Can be strongly recommended.

IMMUNE VARIETIES. It should be understood that Potatoes classed as "Immune" are not always immune from the erdinary Potato Blight or Disease (Phytophthora infestans), but are only immune from what is known as Wart Disease or "Black Scab," caused by the fungus Synchytrium endobioticum. In all instances on ground where the latter disease has made its appearance. enly varieties known to be immune should be planted.

GREAT SCOT (Immune).

GREAT SCOT

GREAT SCOT (Immune.) A mid-season variety of vigorous habit of growth. Tubers round, large, eyes medium depth, skin of flesh white; quality excellent. The haulm is tall, upright and vigorous, leaves dark green and glossy, flowers white, buds usually drop without opening. This variety is an excellent cropper, and may be grown as an early main crop. One of the best of the second early varieties; most suitable for planting on light and medium soils.

Scotch grown Seed. Per 14 lb. 5s. 3d.; 56 lb. 18s.

GREAT SCOT. A good vigorous stock. Class II. Seed. Once grown from Scotch Seed.

Per 14 lb. 4s. 9d.; 56 lb. 16s.

ARRAN CHIEF. A distinct new Main Crop variety of Scotch origin. The tubers, which cluster compactly round the haulm, are very numerous, of good size, nicely rounded, and have comparatively shallow eyes; they are of the very best quality, and make a splendid table Potato. The majority of the tubers are of good marketable size, with very few small, whilst its handsome shape will make it a fine addition to the exhibition table. It has been tested under various conditions for the past three seasons, and experts agree that it is one of the finest additions of recent years to our list of Main Crop Potatoes.

Scotch grown Seed. Per 14 lb. 4s. 6d.; 56 lb. 15s.

KING EDWARD VII. A very fine Main Crop variety; the haulm grows to the height of two feet, and is fairly robust, producing a large crop of handsome tubers. The skin is white, with a blotch of pink about the eyes, which gives it a very pleasing appearance. It is a good cooker, and free from disease; for exhibition it is first class.

Scotch grown Seed. Per 14 lb. 5s.; 56 lb. 17s.

THE ALLY. This is a grand cropping variety which has proved itself immune from black seab. It is an early Main Crop of vigorous constitution, producing a very heavy crop of handsome oval-shaped tubers with white skin and flesh. The eyes are few and shallow. We can recommend this as a thoroughly useful variety for all purposes.

Scotch grown Seed. Per 14 lb. 4s. 9d.; 56 lb. 16s.

UP-TO-DATE. A large handsome potato of very heavy cropping qualities, tubers oval in shape, skin roughly netted, flesh white, dry, and mealy when cooked.

Scotch grown Seed. Per 14 lb. 4s. 9d.; 56 lb. 16s.

DANIELS' SENSATION.

DANIELS' SENSATION. This grand Main Crop Potato is one of the heaviest-cropping and best varieties we have ever grown. It is of a good, robust constitution, the haulm growing about two feet high. The tubers are of good size, thick pebble-shape, with very shallow eyes, almost level with the surface; the skin is white and slightly netted—a sure indication of good cooking qualities—the flesh being white, mealy, and of the finest texture. Its splendid cropping and good culinary qualities, combined with its very handsome appearance, have made this variety a great favourite alike with the cook and Scotch grown Seed. Per 14 lb. 5s.; 56 lb. 17s. exhibitor.

HINTS ON POTATO CULTURE,

Cultivation.—The varieties quoted in our list are the best in cultivation. It is most important that frequent changes of seed should be made, as Potatoes deteriorate if repeatedly saved from the same soil and district. For early work, "Duke of York," the well-known variety introduced by ourselves is etill pre-eminent, and the increasing demand for this kind proves its superiority over all others as a first early.

Much depends upon the selection and treatment of the "sets"; it is therefore necessary to secure good moderate sized Potatoes which should be set up on end in shallow boxes or trays, and allowed to sprout before being planted, as when this is done much advantage is gained both in the development of the plants and in the weight of the crops. Potatoes like a good open position in the garden, and the most suitable soil is a medium to light one in a well-drained position; the ground should be deeply dug and manured in the Autumn. Where stable manure is available a good dressing should be given at the time of planting, placing a layer on the bottom of the trenches; well-decayed leaf-mould, or the remains of an old mushroom hed are also excellent for this purpose.

When planting it is important that an abundance of room be left between the rows and the sets in the row; allow a distance of two feet between rows for the early, and three feet for the late strong-growing sorts, and twelve to eighteen inches between the sets in the rows. Where the land is naturally low and wet it is a capital plan to elevate the rows by forming ridges and so planting the sets on about a level with the natural soil; it is also good to keep the surface soil constantly stirred with the hoe until the earthing up commences.

When the young growths begin to push through the soil care must be taken to protect them from the frost hy continually earthing up the soil round them (neglect of this has often resulted in the loss of a complete crop of Early Potatoes), and when it is desired to grow exhibition specimens only, one haulm should be left to a plant, all the weakest ones being drawn out as they appear. Slight dressings of soot or of "Norwich Fertilizer" during the growing season will be of much advantage. Immediately the growth is completed, the crop should be lifted; choose fine weather for the work and store them after having had a few hours' sun on them.

Where small quantities only are grown it is much better to store Potatoes in a cool dry place where they can be easily got at, as they are not so liable to develop disease as when stored in a pit or trench.

IMPORTANT NOTICE.—Seed Potatoes procured during the Winter and early Spring, when not required for immediate planting, should be taken out of the bag or package in which they are received and laid out in a dry, airy place protected from frost, or they will begin to sprout and a weakly growth will be the result.

DANIELS' SUPERIOR GRASS SEEDS FOR LAWNS, &c.

For many years we have given close attention to the selection of the most suitable Grasses for producing the best Lawns, Tennis Courts, Cricket Grounds, Golf Links, &c., and we have much pleasure in recommending the splendid mixtures we offer as the very best procurable for the purposes named. March and April are the best months for sowing in Spring. September and early October for Autumn sowing. For renovating existing lawns, lightly rake the worst places and bare patches, then sow our Peerless Mixtures (No. 5 or 6) at the rate of half-pound to the rod, or more thickly if the lawn is very bare; apply a thin sprinkling of finely sifted soil, and roll with a light garden roller; protect the newly sown parts from birds.

No. 1. DANIELS' SPECIAL MIXTURE FOR LAWNS.

This is a special mixture of the finest leaved dwarf evergreen Grasses, and will produce an extra fine close velvety turf. First-class for making new lawns or for renovating. Highly recommended.

Per lb. 3s., per bushel 60s.

No. 2. DANIELS' FINE MIXTURE OF DWARF GRASSES.

A splendid mixture of fine Grasses, suitable for Tennis Courts, Croquet Grounds, &c., also a most useful mixture for renovating bare and weak Per lb. 2s. 6d., per bushel 55s.

No. 3. DANIELS' MIXTURE OF DWARF GRASSES.

A good cheap mixture for producing a fine close turf. Per lb. 2s., per bushel 52s. 6d.

No. 5. DANIELS' PEERLESS MIXTURE

Without Perennial Rye Grass. FOR GARDEN LAWNS.

This mixture is composed of the finest dwarf-growing Grasses for producing a fine velvety Turf of extra good quality.

Per lb. 3s., per bushel 65s.

No. 6. DANIELS' PEERLESS MIXTURE

Without Perennial Rye Grass. FOR TENNIS LAWNS. mixture of fine Grasses for producing a close, dwarf, springy turf, most suitable for this purpose.

Per lb. 2s. 6d., per bushel 60s.

No. 9. DANIELS' SPECIAL MIXTURES CRICKET & FOOTBALL GROUNDS.

Per bushel 52s. 6d.

Where larger quantities than those mentioned are required, we shall always be pleased to make special quotations. N.B.-Where no definite instructions are given, we shall supply our Special Mixtures, containing Perennial Rye Grass.

MISCELLANEOUS PLANTS, ROOTS AND SEEDS.

ARTICHOKES.

DANIELS' WHITE MAMMOTH. This is a pure white skin variety of the Jerusalem Artichoke. The tubers, which are more regularly formed than those of the old variety, are somewhat globular in shape and of excellent quality.

Per 14 lb. 3s. 6d.; 56 lb. 12s. 0d. and of excellent quality.

JERUSALEM. Good sound tubers

SMALLOT BULBS.

SHALLOTS.

Cultivation,-Shallots should be planted as early in the new year as weather permits in good rich well-manured soil, use well rotted manure when obtainable as they thrive much better in this. It is still better if possible to plant on ground that was plentifully manured the previous year. Plant in rows about 1 foot apart and 6 to 8 inches apart in the row, do not bury deeply. It is essential that they should be kept free from weeds. When the leaves begin to wither about July, pull up and leave them to dry on the ground for a few days, after which store in a dry place, turn them over occasionally and remove any that show signs of decay. They are considered much superior to onions for pickling.

BULBS. Fine sound bulbs

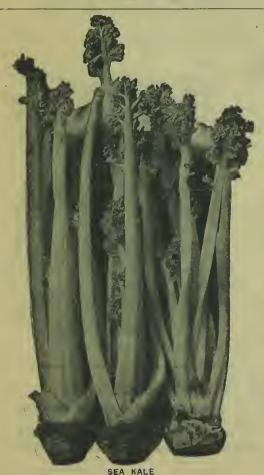

per 7 lb. 6s. 0d.; per lb. 1s. 0d.

[&]quot;I have gained First Prizo for the best cultivated allotment, and I took nine First, four Second, and one Third Prizes."—Mr. T. HEAVESLEY, Stockingford.

ASPARAGUS-CONNOVER'S COLOSSAL.

MISCELLANEOUS PLANTS & ROOTS

ASPARAGUS PLANTS.

An abundance of fine Asparagus may be grown with less than balf the expense usually incurred in making costly "beds," and will succeed admirably on most soils when planted in lines or clumps on the Kitchen Garden borders, or amongst dwarf-growing Fruits where the space will admit, a liberal cultivation being all that is required to ensure the best results. The roots are liable to injury if removed during severe weather in Winter. They are best planted when growth has commenced in Spring, and when they can be carefully taken up and packed so as to travel a long journey, without injury. They should, however, in all cases be planted as quickly as possible after receiving them. We consider March and April the best months for planting.

CONNOVER'S COLOSSAL. Two and three years old ... per 100, 12s. 6d. and 15s.

TRUE GIANT. Two and three years old ... per 100, 12s. 6d. and 15s.

ASPARAGUS SEED.

TRUE GIANT. A fine variety, producing large beads of excellent quality per lb. 6s. 0 6 CONNOVER'S COLOSSAL. A very large variety, very prolific, and of fine flavour per lb. 6s. 0 6 EARLY GIANT PURPLE (Argenteuil). As grown by the celebrated French growers for Paris Market; robust variety of the most delicious flavour per lb. 7s. 0 8

RHUBARB.

One of the most useful, wholesome, and profitable of garden plants. The ground for this should be well broken up and manured, and the plants should be $2\frac{1}{2}$ to 3 feet apart. March is the best month for planting, but it is not advisable to pull any of the stalks the first season for fear of unduly weakening the growth. A top-dressing of well-decayed manure in Winter is very beneficial. CHAMPAGNE. Deep red stems, early, one of the very best for general use. each 2s.; per doz. 21s. DAWS' CHAMPION. A fine new variety of great size and splendid colour. Very productive each 2s. 6d.; per doz. 28s.

DAWS' CHALLENGE. Largest kind known, large clumps

. . . . eacb 2s. 6d.; per doz. 25s.

VALENTINE (new). Very carly, ready end of February

. . eacb 2s. 6d.; per doz. 27s. 6d.

SEA KALE.

This valuable esculent is easily forced if care is taken only to apply heat gradually, as it will not succeed if placed in too high a temperature at starting. Place several crowns a few inches apart in large pots, and stand them in a temperature of about 45 degrees, with an inverted pot placed over each to exclude light and insure blanching; a musbroom house, pit or cellar, will do well for this purpose. Sea Kale may also be easily forced in the open ground by covering it over with large specially made pots, and applying fermenting material. The heads abould be cut when in about the condition shown in illustration, and taken off in the same way.

STRONG PLANTING ROOTS ... per doz. 4s. 0d.; per 100, 27s. 6d.

Will be published in Spring, and will be sent gratis and post free on application. If you are interested, let us register your name at once.

It contains a complete list of the choicest sorts of Mangels, Swedes, Turnips, and other Root Seeds, Clovers, Grasses, and other Forage Plants, besides many valuable hints on cultivation.

HORTICULTURAL MANURES, &c.

DANIELS' NORWICH FERTILIZER. DANIELS' DAISY DESTROYER.

Part of a Crop of Grapes fed with Daniels' Norwich Fertilizer, grown by J. E. Moxey, Esq., Framingham Hall, Norwich.

Without doubt the finest Manure for Fruit, Chrysanthemums, and all general Garden Crops, and we strongly recommend our Customers to give

Prices per cwt., 36/-; ½ cwt., 19/-; 28 lbs., 10/6; 14 lbs., 6/-; 7 lbs., 3/6.

For Destroying Daisies and Plantains and Broad-leaved Plants in Lawns

Various methods are employed to rid lawns of daisies, plantains, &c., such as grubbing them out and using poisonous liquids, &c., but the safest and most effectual way is to use a really reliable lawn sand, and besides it means a great saving of labour.

Daniels' Daisy Destroyer, when used carefully, and the application is followed by a short spell of dry weather, will be found to be a sure remedy. It may give the grass a scorched appearance for a short time, but it does no permanent harm to it. On the contrary, it is an excellent fertilizer. A dressing of about 4 ozs, to the square yard will be found sufficient, and the best time to apply it is in the Spring.

Prices per cwt., 32/-; ½ cwt., 17/-; 28 lbs., 9/-; 14 lbs., 5/-; 7 lbs., 2/9

DANIELS' SPECIAL LAWN MANURE

This preparation is quite simple to use, and if applied during showery weather in Spring it will have a very beneficial effect, giving colour and vigour to the finer grasses, ensuring a thick growth of rich velvety green turf.

A dressing applied in September with an equal bulk of fine soil will be most helpful to Tennis and Croquet Lawns, which have been much worn during the Summer.

One hundredweight will be found sufficient for a full-sized Tennis Lawn, and for smaller lawns it should be applied at the rate of 3 ozs. to the square yard.

Prices per cwt., 35/-; ½ cwt., 18/6; 28 lbs., 10/-; 14 lbs., 5/9; 7 lbs., 3/3

We can supply a very useful book on the Care of LAWNS & GREENS

SPECIAL POTATO FERTILIZER.

(A Splendid Manure also for Onions, Peas, Cabbages, etc.)

Specially prepared for Allotment and Garden Potato Growing. It is a high-class, valuable Manure, and of high guaranteed analysis.

We can very confidently recommend our Special Potato Fertilizer as the best Manure on the market, and one that will not only produce heavy erops but early crops of sound tubers. One of the most important functions that our Fertilizer performs is to assist in the formation of starch and sugar, or in other words, to fill the cells of the potato with nutritious matter, instead of water, thereby increasing the weight and soundness of the crop.

Directions for Use.—Six cwts. per acre; 6 lb. per rod; to be sown in the furrows at time of seeding, and well mixed with the soil. When the tops are through the soil a light dressing may be also applied during showery weather.

In Bags-7 lbs., 2s. 3d.; 14 lbs., 3s. 9d.; 28 lbs., 7s. 6d.; 1-cwt., 14s.; 1 cwt., 27s. Carriage Paid on 28 lbs. and upwards.

- HOTBED. For testing the temperature of Mushroom beds, &c. Metal scale in copper frame and brass stem 20 inches long, price HOTBED. 27s. 6d. Packing and postage 1s.

Prices subject to alteration without notice.

SPRAYING MACHINES.

The Spraying of Fruit Trees has now for many years been recognised abroad and in our colonies as an operation indispensable to fruit growing if clean fruit and healthy crops are to be obtained. It is only during the last few years, however, that the necessity for spraying has begun to be generally recognised in Great Britain. Spraying, to be successful, must be done intelligently. The grower must know what to spray for, what to spray with, and when to do it. It is also most important that the right kind of spraying machine is used. The machines offered here we can confidently recommend; they will be found to be very efficient

> For the various kinds of Insecticides and Washes, sec page 50.

TYPE A.B. STANDARD (GROWERS) KNAPSACK. Capacity 4 gallons full, working 3 gallons. Made in Virex Alloy and complete with fittings as above. Price nett, \$6 18s.

CULTIVATORS.

FLAT PRONG, for digging potatoes

Carriage extra on Spades and Forks 1s. 4d.

BORDER. For ladies' use ...

These Cultivators get deep down and loosen the soil, giving it oxygen. They clean out weeds by the root—they mean more flowers, more fruit, more vegetables, healthier shruhs and trees and a cleaner garden—with less lahour. They are adaptable for all classes of soil—they do the work of hoe, fork and rake in less time and with fuller results.

THE "BUCO" has five prongs, with ash handle, 4½ ft. long. Ss. 6d. each. Carriage 1s. 4d. extra.

AND SELECT VARIETIES OF **SWEET** FOR EXHIBITION AND DECORATION.

Since the Spencer varieties of Sweet Peas were first introduced we have had on several occasions to report very short crops of seed, but we do not remember any year in which such a small crop of seed has been harvested as the present, many growers having saved practically no seed at all. We ourselves are large growers of the newest varieties, and though our crop is much smaller than usual, we hope to be able to supply all our orders in the present season. As some varieties, however, may be exhausted sooner than others, we shall be greatly obliged if any of our customers who desire special sorts will let us have their orders as early as possible. The following list, which we recommend with great confidence, represents the finest of the newer sorts, in addition to those which have obtained the highest commendation during the past summer, and are now offered for the first time.

- 1 ANNIE IRELAND. This is the very per finest picotee-edged Sweet Pea yet s. d. raised; a strong grower with many four-flowered sprays. The colour is a clear white distinctly edged with terra-cotta pink. Award of Merit, R.H.S. 6d. and 1 0 ATTRACTION. Although there have been many new pink Sweet Peas introduced lately, this variety will be found well worth a trial. The very large flowers are of a deep shell-pink, suffused fawn. Many of the blooms have double standards, giving the sprays a most effective appearance 6d. and BLUE STONE. A distinct and striking 6d. and 1 0 new variety of great value for decorative work. The flowers are of aniline blue, with a bluish-violet shading on the standards. Free-flowering & of vigorous growth 6d. & BROCADE. A distinct and charming colour, of a pleasing satin rose tint with many abolize the beauty of the standards.
 - with mauve shading, the base of the standard deeply suffused mauve. Of robust growth, with large wellwaved flowers. Awards of Merit, R.H.S., Chelsea, Wolverhampton, and Manchester . 6d. and DAISYBUD. Beautiful soft, rich, rose 6d. and 1 0
 - pink on white ground. Exceedingly vigorous with many five-flowered stems. Of great merit, both as a decorative or exhibition variety. Award of Merit ... 6d. and 6d. aud 1 0
 - DORIS. A beautiful sunproof variety of a charming rich cerise cherry-pink. Flowering abundantly on long stems, large well waved flowers. Award of Merit, R.H.S., and Silver Medal, Chelsea 6d. and
 - HAWLMARK PINK. The richest coloured Sweet Pea ever seen, excelling Audrey Crier in depth of colour, absolutely fixed and true. Vigorous; producing an abundance of beautifully frilled flowers of ideal form of a rich bright rosepink, flushed and shaded salmon. Awards of Merit, R.H.S., Chelsea, Wolverhampton, Manchester, and Belfast. Silver Medal, Chelsea 6d. and 1 0
- 6d, and
- seedling bunch class of the National Sweet Pea Society. Award of Merit, R.H.S.

NEW SWEET PEA-MASCOTT'S WHITE.

- 10 MASCOTT'S WHITE. This is the per finest white Sweet Pea yet raised. s. d The flowers are of the largest size and of great substance, giving a most solid glistening effect without the least trace of other colouring. The blooms are beautifully placed on long wiry stems, and in the raiser's opinion produces far more flowers on each plant than any other kind. Award of Merit, R.H.S.
- 6d. and 11 MAGIC. One of the most distinct Sweet Peas yet offered. The deeply waved standards are of a glowing rosy amethyst deepening to blue, the wings of an intense shado of blue overlying lavender. In a strong light the whole so changes in character that an adequate descrip-tion is impossible, the standards having the appearance of liquid bronze. Unequalled for decoration, lasting well in water 6d. and 12 MRS. TOM JONES. A huge flower
- of great substance, beautifully waved and well placed on long stout stems—four-bloomed sprays predominate, with an occasional five. The colour is bright del-phinium blue, deepening to amethyst blue as the flower develops. A most attractive and fascinating colour. Award of Merit, R.H.S.
- 13 PICTURE. In the opinion of practically all the experts "Picture" marks the greatest advance up to date. The flowers are of enormous size and superb form, the outlines of the flowers being in every respect the most perfect in existence. The stems are of great length, and six perfect blooms on a spray occur frequently. The colour is a rose-flushed flesh pink, the whole suffused creamy apricot, a
- 14 ROYAL SALUTE. This is the finest sun-resisting orangescarlet yet produced, the brighter the sun the more dazzling the colour becomes. Free flowering ... 6d, and
- 15 ROYAL SCOT. This is undoubtedly the finest scarlet Sweet Pea. The colour is the most brilliant scarlet, and does not burn or fado in hot sunshine. It is strong growing, with a profusion of four-bloomed sprays of beautifully waved flowers. Award of Merit, R.H.S. ..
- 16 SPLENDOUR. This grand variety resembles "Warrior" in vigour of growth and size of flower. It is brighter in colour than that variety, being a rich red maroon, without a trace of purple. The finest in this colour yet raised 6d. and 6d. and 1 0

DANIELS' SPECIAL COLLECTIONS OF SWEET PEAS.

The following liberal collections include what we consider the best selection of varieties for exhibition or for cut flowers. Towards the end of the sowing season we may have to substitute some varieties.

Alexander Malcolm. Cerise searlet.

*Beryl. Salmon-pink shaded buff.

†*Blue Picotee. White, edged violet.

†*Clara Curtis. Primrose yellow.

*Constance Hinton. Pure white.

*Dorothy. Rosy lilac.

*Earl Spencer. Orange rose.

*Edith Cavell. Rosy pink on cream.

Etta Dyke. Pure white.

*Fiery Cross. Brilliant scarlet.

*Hercules. Clear rose.

*Illuminator. Glowing orange-searlet.

‡ Jean Ireland. Buff, edged carmine rosc. *John Ingman. Brilliant carmine.

*John Ingman. Brilliant earmine.

*King Edward Spencer. Crimson searlet.

*King White. Puro white.

*Margaret Atlee. Apricot on cream.

*Picotee. White, edged earmine.

† R. F. Felton. Lilac and French grey.

*Royal Purple. Bright purple.

\$ Salena. Cream, flushed rosy searlet.

*Suppressor Crimson. Right eringson.

Sunproof Crimson. Rich crimson. The President. Orange-searlet. **Wedgewood. China blue.

DANIELS' SPECIAL MIXTURE OF GIANT-FLOWERED SPENCERS.

We highly recommend this splendid mixture which we feel sure will give great satisfaction. The varieties included are all of the true Giantflowered and Spencer types, and the colours include all the most brilliant and beautiful shades of searlet, crimson, magenta, orange, salmon, pink, davender, mauve, cream and primroso to the purest white. This will prove a first-class mixture where really good Sweet Peas are required for cut bloom.

LARGE-FLOWERED COLLECTIONS.

Cultivation.—To grow really fine Sweet Peas, the ground should be deeply dug or trenched, and plenty of well-decayed manure with some coarse bone meal worked well in and to the bottom of the trench. This should be done in Autumn if convenient, or as early as possible in Spring.

For early blooming, sow the seeds thinly in pots or pans in January or February, and place in a gentle heat; harden off as soon as the plants are well up, and plant out as soon as convenient in March. As growth advances some weak liquid manure should be given once or twice a week, and if the weather continues dry, a mulching of some short, well-decayed manure should be placed on the surface about the roots. This will be of great benefit

in stimulating a healthy growth, and some splendid flowers will be produced.

For later successive blooming the seeds may be sown out of doors at intervals from early March to the middle of May, giving them a similar treatment to that recommended above. Excellent results may also be had by sowing in October or November in a sheltered position in the garden. These, with a slight protection, will survive a moderately severo winter and furnish some nice blooms for cutting earlier than those sown in Spring.

If the blooms are closely gathered and seed pods not allowed to develop, the plants will continue in bloom for a much longer period.

TWENTY-FOUR SPLENDID VARIETIES, as above EIGHTEEN SELECTED VARIETIES, marked (*)
TWELVE SUPERB VARIETIES, marked (‡) 6 SIX FINE VARIETIES, Constance Hinton, Hercules, John Ingman, Jean Ireland, King Edward Spencer, Royal Purple 2 6

SPENCER SWEET PEAS IN VASE.

DANIELS' SUPERB PRIZE ASTERS.

Cultivation.—Asters are alike useful for borders and as cut flowers, the single kinds being of especial value for the latter purpose. The seed should be sown in March or April in boxes of good rich soil, and treated in the same manner as other half-hardy annuals; give plenty of room between the plants, and place the boxes in a sunny position under glass, allowing abundance of air and water; after about three weeks remove the boxes to a frame where the lights can be lifted off during the day, and so gradually harden the plants in readiness for their removal to the borders. The greatest care should be exercised in transplanting from the boxes, so as to ensure the seedlings getting a good start.

ASTER-DANIELS' GIANT OSTRICH PLUME.

OSTRICH PLUME (Ordinary Class).

Charming varieties of exquisite beauty. The large flowers are borne on long stems, and the petals are beautifully curled and twisted, giving them somewhat the appearance of Japanese Chrysanthemums.

DANIELS' GIANT OSTRICH PLUME.

We have much pleasure in recommending this grand strain of beautiful varieties; the very large handsome flowers, which are borne on long wiry stems, are of the true Ostrich Plume type, and of immense size—when well grown, frequently measuring six inches and even seven inches in diameter, whilst the colours embrace the most beautiful and delicate shades. These will prove a splendid class alike for garden decoration, as cut flowers or for exhibition. Height about 18 inches.

DANIELS' PRIZE ASTERS.

DANIELS' GIANT SINGLE ASTERS.

DANIELS' DWARF PERFECTION BEDDING.

These beautiful dwarf Asters, introduced by us a few years ago, have proved themselves by far the finest and best dwarf bedding varieties in existence. The plants grow only about 7 or 8 inches high, with stiff upright stems and branches, and form handsome circular busby plants with the flowers well above the foliage. The blooms are of large size, perfectly double, beautifully imbricated and of the most perfect form. Planted in beds of distinct colours or used as an edging, they are splendidly effective and continue in bloom for quite a long time.

SINGLE-FLOWERED ASTERS.

All the varieties of Singlo Asters have attained great popularity during the last few years. They are extremely free-flowering, the flowers being horne on strong stiff stoms making them very valuable for cutting. The blooms have small golden yellow centres, and the single row of petals gives them a light, graceful effect seldom obtained in Annual flowers.

Per pkt.—s. d. 150 APPLE BLOSSOM (new). A charming shade of rose shaded white, good border plant;

DANIELS' SUPERB TEN-WEEK AND OTHER STOCKS.

GIANT ENGLISH BROMPTON STOCKS.

An exceedingly fine and useful class of Spring flowering plants of the old cottage garden type, producing large, handsome spikes of beautifully coloured and deliciously scented flowers in April and May. The seeds should he sown in May or June, and soon as the young plants are large enough to handle, prick them out about six inches apart on nursery beds in a sheltered position where they can remain during Summer. In Septemher or October they should be planted out where intended to hloom in Spring. The plants grow ahout two feet high, and should be planted eighteen inches or more apart.

IN WEEK STOCKS				

CULTIVATION OF TEN-WEEK STOCKS.

165

166 167

168 169

171

172 173

Ten-Week Stocks are easily raised from seed, hut require careful treatment when in the seedling stage, as they are liable to damp off If over-watered and kept close, but if they are given an ahundance of air and kept moderately moist, nothing need be feared and sturdy plants are assured. Sow from Fehruary to April under handlights or in a frame close to the glass, use a light rich compost, prick out under handlights, &c., to strengthen, barden off by giving plenty of air, and plant out towards the end of April where intended to flower. For succession sow in April or May in a sheltered place, and thin out or transplant.

In planting out seedling Ten-Week Stocks, with a view to securing the largest number of double flowers, preference should always be given to those with a good share of fine fibrous roots, even if the plants are somewhat weaker; we have found from long experience that those having coarse

forked roots invariably produce the largest percentage of single blooms.

DANIELS' SUPERB TEN-WEEK STOCKS

STOCK-Daniels' Large Flowered Ten-Week.

DANIELS' LARGE-FLOWERED TEN-WEEK STOCKS.

This is incomparably the finest strain of Ten-week Stocks in existence, and, where space is limited, should always be grown in preference to others. The plants which attain about one foot in height are of the same compact habit as the dwarfer varieties, but the flowers when well grown are nearly double the size of those of the old variety. The seeds of this always produce a high percentage of double flowers, whilst in substance of petal, brilliancy of colouring and richness of fragrance they are unrivalled.

DANIELS' GIANT PERFECTION TEN-WEEK.

A grand class of tall growing, beautiful varieties. The plants attain a height of from 15 to 18 inches, are of a handsome pyramidal form with branching habit, and throw up long central spikes of large, beautifully

double flowers. This is an exceedingly fine strain that we can highly recommend.

EAST LOTHIAN STOCKS.

This splendid strain of Stocks gives a longer succession of bloom than any other kind and has a very good percentage of doubles. Sown in February or March it flowers in late Autumn after the Tenweek Stocks are over. It is also very useful as a pot plant from seed sown in May or June, and when sown in July or August and wintered in a frame will give a magnificent display in the early support months.

STOCK-DANIELS' GIANT PERFECTION.

DANIELS' SELECT ANTIRRHINUMS.

ANTIRRHINUM-THE BRIDE.

The value of Antirrhinums for garden decoration is now evidenced by the great popularity they enjoy, the advance in a few years being most remarkable. A great deal of this is no doubt due to the fact that many charming new colours have been evolved; also to their free-flowering habit and the trueness to colour now displayed by them. There is still some difficulty in getting the pink strains to flower perfectly true to colour, but this can easily be obviated by having a few plants in reserve. The cultivation is extremely easy. Seed may be sown from January to March in very gentle heat for flowering the same year; or if extra sturdy plants are required, seed may be sown at any time during the Summer months, and planted out in Autumn or Spring in the beds.

TALL GROWING VARIETIES.

. This class is more suitable for border decoration than for beds, most of th			
of from 2½ to 3 feet. They add a long display of colour to herbaccons borde	ers if plar	ited in g	roups

0 6 DANIELS CAMELLIA-FLOWERED.

BROWALLIA SPECIOSA MAJOR.

300 A charming plant for pot culture, growing about 18 inches high and producing large beautiful sky-blue flowers 6d. and

BEGONIAS.

Sow the seeds on the surface of well-drained pots or pans of light rich soil, press the surface firm before sowing and sprinkle with tepid water, cover the pot or pan with a sheet of glass to retain the moisture, and place in a heat of 65°. As the seed of Begonias does not germinate very quickly or evenly, and a long interval will often occur between the first and last plants coming up, the young seedlings should be carefully lifted as soon as large enough to handle, and pricked into pots or pans to grow on, and this will make room for the succeeding young plants. These same in February will make room for the succeeding young plants. Those sown in February, if grown on freely, will commence blooming in June. Seeds may also be sown later, and will form nice healthy tubers before Winter.

BEGONIA-DOUBLE FLOWERED.

CALCEOLARIAS.

CALCEOLARIA-DANIELS' CHOICEST STRAIN.

We have much pleasure in offer-ing our splendid strain of Calceolaria hybrida, which has been carefully saved from a magnificent collection during the past season. The flowers will be found of large size, beautiful form, and tigred and spotted with the most exquisite and brilliant markings.

Sow the seeds in well-drained pots or seed-pans; cover the drainage with rough fibrous leam, and fill up the surface with fine, light, sifted mould and silver sand; water with a fine rese water-pot, after which sew the seed, placing a piece of glass over the pot to retain the meisture, no covering of seil being required. Place tho pots in a cool frame or under a handlight, taking care to shade from the suu. Prick off one inch apart into pots or pans mado up as before,

placing in a somewhat close situation, and when of sufficient size pet off singly, and troat in a similar manner to that recommended for tender annuals. Calcelarias should be always kept in a cool, meist position, and they annuals. Calecciarias should be always kept in a cool, meist position, a dry heated atmosphere being very prejudicial to their growth, and they should be kept well supplied with fresh air.

Per pkt.—s. d.

347 DANIELS' CHOICEST MIXED. Beautifully spotted and marked; the most perfect type. . . . 1s. 6d. and 2 6

348 BUTTERCUP. An attractive new hybrid for conservatory or

summer bedding. Seed may be sown in August fer Spring flowering in the greenhouse or early in Spring for bedding out. Golden yellow flowers. Award of Merit R.H.S.

CARNATIONS.

Carnatien seed should be sown in well-drained pans of good rich soil, and kept shaded until the seed has germinated, when the plants should be gradually hardened off by admitting air and light. Prick off the scedlings about nine inches apart in boxes or prepared borders, and let them stay there until the Autumn, when they may be permanently planted in the

positions they are to occupy.

The Perpetual or Tree varieties are a very valuable class, giving as they do a charming display in Winter,

when flowers are so much valued.

The "Marguerite" Section is a special favourite with amateurs, as the plants when raised from seed early in the Spring, produce an abundance of flowers during the Summer; if sown in June, carefully lifted in Autumn and potted up, they will continue to bloom right into the Winter

349 DANIELS' CHOICEST
MIXED. A very fine
strain of beautiful varieties, saved from stage flowers, and will produce a high percen-tage of double blooms ls. 6d, and

LARGE-FLOWERED PENTSTEMON.

CANARY-BIRD NASTURTIUM.

(Tropæolum canariense.)

565 Well-known useful annual climber

PENTSTEMONS.

These beautiful free-flowering plants succeed admirably when treated as halfhardy annuals, and sown in February or March on a gentle heat and planted out in May they will commence blooming in July and continue to throw up their lovely spikes of flowers till late Autumn. The new large-flowered hybrids produce some charming flowers, many of them being equal to the finest named sorts. The plants grow ahout 18 inches high.

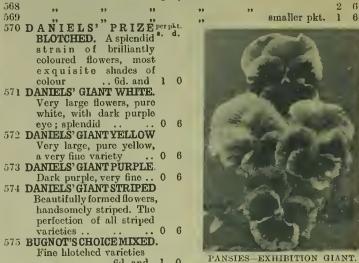

566 NEW LARGE-FLOWERED HYBRIDS. Choicest mixed, from a magnificent 6d. and 1 0 strain ..

DANIELS' SUPERB PANSIES.

These beautiful, free-flowering, hardy plants are easily raised from seed, and will richly repay the small cost and trouble required to grow them to perfection. Sow in Fehruary, March, and April in boxes of light rich soil placed in a gentle heat, and as soon as large enough, prick out about two inches apart on rich soil; finally plant out six or eight inches apart, two inches apart on rich soil; finally plant out six or eight inches apart, in ground into which well-decayed manure has been worked. Pansies delight in a somewhat shady position, and plenty of moisture in dry weather. The finest blooms are produced the second year, and grand flowers may be had by sowing in July or August in the open ground, and planting out in the following Spring into good rich soil.

Per pkt.—s. d. 567 DANIELS' EXHIBITION GIANT. A superb strain of extra large and beautifully coloured flowers of the highest type, and including the most subarrainer, and rightly coloured actioned and blacked.

charming and richly coloured stained and blotched flowers. Many of the blooms from this strain will be found equal to the finest named varieties. Very choice mixed seed. Highly recommended

PHACELIA CAMPANULARIA.

585 A showy hardy annual from California, growing about one foot high, with bell-shaped flowers of a bright blue colour, which continue for a long time

POLYANTHUS.

A beautiful free-flowering class of hardy perennials which has been highly improved of late years. The plants are about six inches high, and bloom about the same time as primroses. The large-flowered varieties in their many beautiful colours are very charming and should be used extensively for Spring gardening.

586 LARGE-FLOWERED, CHOICEST MIXED. A very fine strain of beautiful varieties, very free-flowering 6d. and 587 POLYANTHUS-PRIMROSE (bunch-flowered). Choicest mixed hybrids, special selection ... 588 GOLD-LACED. Fine, from a choice collection 6d. and

PETUNIA-DANIELS' SUVERB FRINGED.

PETUNIAS.

Petunias for indoor cultivation may be sown in January or early in February, but those intended for bedding out do not require to be sown before March. A soil composed of two parts loaf-mould and one part loam, with the addition of a little sharp sand, forms an excellent compost for these, but the seeds being very small require special care in sowing. As soon as the young plants can be handled, prick them out about one inch apart to strengthen, when sufficiently advanced pot off singly into small pots, gradually harden off, and plant out about the middle of May, or shift into large pots as required. In planting Petunias, out of doors, ground should be selected that has not been freshly manured, otherwise a superabundant foliago will retard the flowering.

DANIELS' SUPERB FRINGED.

A beautiful class, large and strikingly handsome flowers, the petals being elegantly laciniated or fringed.

pkt.—s. d.

pkt.—

HYBRIDA GRANDIFLORA.

DWARF BEDDING.

PELARGONIUMS-GERANIUMS.

ZONAL PELARGONIUMS.

A splendid class of beautiful free-blooming plants, admirably suited for greenhouse or conservatory decoration; may be had in bloom nearly all the year round. Sow in February or March in pots of light rich soil, covering the seeds to the depth of about a quarter of an inch, and place in a heat of about sixty-five or seventy degrees. These will bloom the first year, and some really beautiful varieties may be expected.

600 FRENCH BLOTCHED or REGAL. Beautiful ls. 6d. and 2 6 601 FANCY VARIETIES. Very choice mixed 1 6 602 ZONAL. Single-flowered, from finest named sorts . . . 1 6

PHLOXES.

Seeds of these beautiful annuals should be sown from February to April, and as soon as the plants are large enough transplanted into boxes, finally planting out in May. Seeds can also be sown in the open during May, and will give a late display.

PHLOX DRUMMONDI GRANDIFLORA.

The grandiflora varieties form a magnificent class; the plants are robust in habit, and the flowers, which are of various rich and beautiful colours, have in many of the varieties large, conspienous white eyes; the individual blooms are of fine substance and scarcely inferior in size to the perennial sorts.

POPPIES. ANNUAL POPPIES.

POPPY-DANIELS' SELECTED SHIRLEY.

A brilliant and charmingly effective group of hardy annuals of great value for garden or shrubbery decoration.
The single-flowered varieties are especially valuable as cut flowers, and if eut when the blooms are just beginning to expand, will retain their beauty for four or five days. The beautiful Shirley Poppy, sown at intervals from early Spring to the end of June, will give a charming display quite into the Autumn.

625 DANIELS' SELECTED SHIRLEY. The fine strain we offer has been carefully selected and includes all the most brilliant and exquisite shades of colour. Highly recommended for eut flowers. Height 2 feet.

DANIELS' SUPERB FRINGED PRIMULAS.

The beautiful varieties of Primula sinensis may be sown in March, April, May, and June. Great care must be taken to have a well-drained pot or seed-pan filled to within half an inch of the top, with sifted leafmould; leave the surface rather rough, and sprinkle the seeds thinly upon it. The most successful raisers do not cover with soil, but after sowing the seed press down the surface tolerably firm, and place a square of glass over the pot. Place in a good strong heat, shaded from strong light, and water

very gently when the soil becomes dry. It is with very much pleasure that we offer the grand strains of Primulas named below, all of which have been specially grown for our retail trade, and will give the highest satisfaction. The flowers will be found of great size and perfect form, combined with the most brilliant and charming colours, and a habit of plant which leaves nothing to be desired.

"KING GEORGE V."
(new). Very large, beautifully fringed flowers, of intense crimson.

SCHIZANTHUS.

A beautiful class of halfhardy annuals of olegant growth which succeed well grown out of doors. They are also of great value for pots in the green-house where they are charm-ingly effective. The flowers vary in colour from delicate pink and rose to carmineyellow, apricot, mauve, crimson and other lovely shades, the long sprays of bloom being very useful when cut.

For pot culture seed may be sown at almost any time, and splendid specimens may be had by sowing in Aug. or Sept. for Winter blooming, about five plants in a six inch pot being most suitable.

678 WISETONENSIS, PINK PEARL(New). This charming novelty produces sheafs of lovely flowers, and like of lovely flowers, and like its parent variety, makes an unsurpassed plant for conservatory decoration. The glistening white corolla is set off by a broad margin of rosy pink on wing and lip petals, wonderfully en-hancing its beauty. 18 6d

The COTTAGER'S Packet of Choice Flower Seeds, 12 varieties, 1s. 6d.

These collections, including Stocks, Asters and Sweet Peas, of which we sell a large number every year, represent the bighest value possible to give, and can be confidently expected to furnish a good display for any small garden.

DANIELS' SUPERB GLADIOLI.

We would strongly recommend all who have not yet grown them to procure the new Giant-flowered hybrids, which can be highly recommended for making a display of rare beauty in the garden. The hybrids of G. Gandavensis are also well known and very popular. Plant the corms firmly, three to four inches deep and eight or nine inches apart, in clumps as required, and put a neat stake to each when the flower buds make their appearance. March is the best month to plant for blooming in July and August, and by a few successive plantings in April and the early part of May, a succession of handsome flowers may be had to the end of September. Gladioli are of especial value as cut flowers. If the flower spikes are placed in water just as the blooms are beginning to expand, they will all open in succession to the topmost bud, and will retain their beauty for a long time.

GLADIOLUS-ALBION.

VARIETIES.

ALBION. A charming pure white, with a tinge of earmine at the bottom of the throat.

Each 4d.; per doz. 3s. 6d. AMERICA. Lovely soft pink, magnificent spike.

Each 3d.; per doz. 2s. 6d. BARON HULOT. Dark violet blue Each 4d.; doz. 3s. 6d. BRIMSTONE. A fine new pale sulphur yellow, strong growing, long spike.

Each 5d.; per doz. 4s. 6d. ELECTRA. Brilliant scarlet with orange shade; throat conspicuously blotched very pale cream. A fine variety

PPLES.

The great demand for all Fruit Trees experienced during the past five years, together with the difficulties in working stocks the latter part of the war period, have resulted in a shortage for this season of some style of trees, especially Standard Apples,—these are practically unobtainable in the Kingdom.

We are however able to offer an exceptionally fine stock of Bush, Pyramid, Espalier and Half-Standard Apples, Pears, Plums, To enable our customers to select their requirements we have set out the Apples in sections, showing the Varieties of each

style that we can offer with the prices attached.

We work our Apples on both the Crab and broad-leaved Paradise Stock, according to the varieties. Dwarf Apples on the Paradise Stock are of especial value for garden planting, and have come into favour during recent years. They are much dwarfer in growth, come into bearing and profit much sooner, are easier to thin and spray, and they produce almost continuously abundant crops of much finer fruit. For small holdings, or where the tenure is uncertain, they are specially recommended.

PEASGOOD'S NONSUCH.

NEW APPLES OF SPECIAL MERIT.

HARLING HERO (Our Introduction). A most valuable addition to the late cooking varieties. It is a heavy cropper, a sturdy grower of a very hardy constitution, and thrives well on all soils. It possesses a remarkable beauty of colour and perfect shape; very large. Dec. to Feb. 2 years, 10/6 cach.

MONARCH. A cross between "Wellington" and "Peasgood's Nonsuch." Very large, firm fleshed, handsome appearance, quality superior, and requires less sugar. Heavy bearer and good sturdy grower. Oct. to April. 2 years, 10/6 each.

NORVIC (Our Introduction). Large and handsome fruit when rive it is a creatily reflected for the state of the state

fruit, when ripe it is a greenish yellow; a first-rate cooking variety and of fine flavour; a most valuable acquisition both for private and market growers. Nov. 10'6 each.

GENERAL LIST OF SELECT VARIETIES.

D. denotes Dessert. K. Kitchen.

LORD SUFFIELD.

In all cases where customers leave the selection of varieties to us, they may rely on only good trees of the best kinds being supplied. It is most important, however, that the style or shape of trees required should be clearly stated when ordering.

PRICES OF APPLES.

BUSHES, 5 6 and 6/6 cach, 60 - and 72/- doz. PYRAMIDS, 7/6 and 8/6 cach, 84/- and 96/- doz. CORDONS, 5/6 and 6/6 cach, 60/- and 72/- doz.

We have a splendid assortment of all the following Varieties in Bushes, Pyramids and Cordons. For Special Offer of certain of these Varieties in Horizontal Trained, Bushes on Short Stems, Half Standards, see following page.

Horizontal Trained, Bushes on Short Stems, Hall ALLINGTON PIPPIN. A splendid medium-sized Apple introduced a few years ago, and which has taken a position in the front rank as a first-rate dessert variety and a reliable hearer. In form it resembles Cox's Orange. It is immidiate the property of the control of the control

also page 77.

EARLY VICTORIA (K). Pale lemon-coloured, very early variety of the Codlin type; very free bearer. July and Aug. See also page 77.

ECKLINVILLE SEEDLING (K). A large and usoful sort; flesh white and tender; a great bearer. Oct. to Dec. See also page 77.

ELLISON'S ORANGE (D). A delicious dessert Apple approaching in appearance and flavour to Cox's Orange Pippin; a good keeper.

GASCOIGNE'S SCARLET (K). Large, a distinct, richly coloured orchard apple, extremely handsome, and a great bearer; prolific on Paradise, and a licalthy grower. Prune lightly. Nov. to Jan. F.C.R.H.S.

HERRING'S PIPPIN. Delicious and of handsome appearance, Pearmain shape, flesh yellow, crisp, and sweet. Cordons, and Pyramids.

LANE'S PRINCE ALBERT (K). Large, ex-

Pyramids.

LANE'S PRINCE ALBERT (K). Large, exfreinely handsome striped fruit, very prelific, keeps six months; its fertility is remarkable. ('ordens or Bushes, on the Paradise Stock, produce grand exhibition fruit. F.C.R.H.S. Oct. to March. See also page 77.

LORD DERBY (K). Large, handsome, heavy cropper; one of the best. Nov. and Dec.

LORD GROSVENOR (K). Large and handsome culinary Apple. Sept. to Nov.

LORD SUFFIELD (K). Fine variety of "Keswick Codlin" type. Early and prelific; one of the best cooking Apples. Aug. and Sept.

NEWTON WONDER (K). Large; a handsome fruit, keeping soundly, free grower and bearer; one of the best. In growth and stardiness this surpasses all others. A sterling kind for orchard or garden. F.C.R.H.S. Nov. to May. See also page 77.

NORFOLK BEAUTY (K). A cross between "Warner's King" and "Dr. Harvey." Fruit large, pale green changing to yellow. In appearance, intermediate between the two parents. See also page 77.

PEACEMAKER. A very large and handsome culinary Apple. The fruit is pale yellow, flushed with erimson, a heavy cropper.

PEASGOOD'S NONSUCH (D.K.). Very large and handsome, pale yellow, with bright crimson. Of diffuse growth on Paradise; requires its roots well prined to induce fortility in a young state. We recommend it for garden culture and exhibition. As a Standard it takes some years before it comes to profit. F.C.R.IL.S. Sept. to Jan.

REV. W. WILKS (K). A very large, culinary Apple of fine form; good grower and free bearer. RIBSTON PIPPIN (D). Medium; a well-known sort, succeeds best on Paradise stock. The finest fruit is produced on Cordons; not suitable for orchards, should only be planted in warm soils. Nov. to March.

STIRLING CASTLE (K). An early and free-bearing Apple; a great bearer, and well-suited for dwarf enliture. Aug. and Sept. (S.) See also page 77.

WARNER'S KING (K). A very large and splendid Apple of first-rate quality; the tree is a free and vigorons grower, a great bearer, and not subject to disease. Nov. to March. See also page 77.

WORCESTER PEARMAIN (K.D.). Handsome early variety, suitable for kitchen or dessert;

See also page 77.

WORCESTER PEARMAIN (K.D.), Handsome oarly variety, suitable for kitchen or dessert; a great favourite in the market. Aug. and Sept. See also page 77.

APPLES.

BUSHES and HALF-STANDARDS FRUITING SIZE. SPECIAL OFFER.

BUSH APPLES on SHORT STEMS

We offer below a range including most of the best Kitchen and Dessert Apples in Bush trees with short stems. These trees possess many advantages for anyone liaving only a limited space for fruit growing; they can be planted closer together and a heavier crop is thus obtained from a given area, they are handy both for spraying, pruning and gathering. Further, the fruit is, as a rule—given proper attention to the trees of first-class quality. Bushes with short stems such as offered are also easier to treat in applying grease bands, the stem allows these to be placed without any difficulty.

The trees should be planted 15 ft. apart. Allington Pippin (D). Nov. to Jan.
Annie Elizabeth (K). Dec. to May.
Bramley's Seedling (K). Sept. to Junc.
Beauty of Bath (D). July and Aug.
Barnack Beauty (K). Dec. to May. Cox's Orange Pippin (b). Nov. to March. Early Victo ia (K). July and Aug. Grenadier (K). Oct. and Nov. Lane's Prince Albert (K). Oct. to March.
Lord Derby (K). Nov. and Dec.
Nowton Wonder (K). Nov. to May.

SPECIAL COLLECTION BUSH FRUIT TREES.

This offer is made to meet the needs of those having small gardens or allotments, and who have not room for a large number of Fruit Trees.

RED CURRANTS. 2 APPLES, Bush. GOOSEBERRIES. 12 RASPBERRIES. BLACK CURRANTS. 1 PLUM, Bush. 40 STRAWBERRIES. PEAR, Bush.

The above Bushes and Plants for 37/6, Packing Free, Carriage Extra.

We experience a large demand for this Collection. The solection of Varieties must be left entirely to ourselves, and no alterations can be made in any way whatever.

HALF-STANDARDS.

We give below a list of varieties of Apple of which we are able to supply half-standards, and we especially recom-mend these to those who desire to grow trees on stems.

Where the land is to be cropped between the trees they will be found most suitable : they are also admirable for planting in ground which is used for poultry runs, the branches being sufficient distance from the ground to prevent the birds destroying the fruit.

The trees are all well grown, of fruiting size, and will quickly give a return. The varieties include all the best for cooking and dessert, both early and late sorts.

The trees should be planted 18 ft. apart.

ALLINGTON PIPPIN

CULTIVATION.

For small occupations and allotment gardens Dwarf or Pyramids are best planted eight to twelve feet apart on each side of the path, and about three

The best situation for Fruit growing is a fairly open piece of ground, protected from the east and north-east if possible, as the winds from these quarters, when the trees are in blossom in Spring, often are most injurious, and ruin the erop for the whole season. A good deep loam is the ideal soil, and the preparation before planting the trees should receive most eareful attention.

If the ground is heavy and cold, it should be thoroughly drained, and receive a good dressing of lime or ashes, which should be thoroughly incorporated with the soil to lighten it; on the other hand, if a light sandy soil is the only piece available, a dressing of elay or brick earth will give body to it

and be of much value.

Probably the cause of failure with most people is to be found in not using eare in planting the trees; too often the hole made for the tree is not large enough, and consequently the roots are erowded together in a bunch, and they cannot thrive as they should; it is of the utmost importance that the holes should be sufficiently large to allow of the roots being laid straight out, and if this is done and the soil carefully shaken between the roots, being at the same time made gradually firm, and the stem quite secure, little fear need be entertained as to the future.

Pears should be much more freely grown than they are. The young trees come into bearing much earlier than is generally supposed, especially when worked on the Quince stock. Many of the varieties are exceedingly prolific, whilst the fruit are more valuable than Apples, choice sorts always finding a ready sale at good prices.

We are only able to offer the following varieties in STANDARDS, each 8/6, per doz. 95/--The Czar Victoria Greengage Merryweather Coe's Golden Drop Farleigh Prolific Bryansten Gage Cox's Emperer

APRICOTS.

DWARF TRAINED, 10/6 and 12/6 cach. HEMSKERK, Flesh tender, juicy, and richly flavoured. July and Aug. LARGE EARLY. Very rich and juicy, July

flavoured.

LARGE EARLY. Very rien and Aug. and Aug.
and Aug.

MOORPARK. One of the best. Aug. and Sept.
PEACH. Very large, rich, and juicy; one of the finest of all. Aug. and Sept.
ROYAL. Large, rich and juicy. July and Aug.

CHERRIES.

Cherries thrive en almost any free working, deep, sweet, well-drained soil, provided they have plonty of fresh air. Wherever the soil shows the slightest tendency to seurness, this should be checked by the application of lime.

All Cherries grew well as a rule upon an East wall. Where early crops are wanted a South wall is of course preferable. On a West wall, particularly in a wet district, the fruit is liable to crack.

crack. DWARF TRAINED. 8/6 and 10/6 cach. STANDARDS. 7/6 each. PYRAMIDS. 8/6 each.

GENERAL LIST.

GENERAL LIST.

BIGARREAU, Large and of first-rate quality; a capital bearer. July.

SEA EAGLE. Very large, good flavour; remarkable for colour and size. End of Sept.

STIRLING CASTLE. A fine hardy Peach of the "Royal George" type, large, skin deep red on sunuy side, rich. Aug.

FIGS.

Figs will grow in almost any soil, but if it be too rich they produce a great deal of wood and vory little fruit. Expherance of growth is one of their chief characteristics. This can be restrained by limiting their rooting area and making the soil firm. They require a considerable amount of moisture when the fruit is swelling. Good drainage is also essential.

STRONG PLANTS, in pots, Trained flat.

BROWN TURKEY. Most abundant hearer; the finest for out door.
BROWN TURKEY. Strong Plants, Fan-trained, frem open ground. 12/6 each.
NEGRO LARGO. Very luscious, free bearer, strong grower; large rich choeolato pumple fruit; splendid for second crop under glass, but not fertile outside. F.C.
WHITE ISCHIA. Small, sweet and delicious; produces three crops a year lu heat; forces well; great hearer; for indoor culture only.

STRONG [PLANTS, 10/6 and 15/- each.

CURRANTS. BLACK.

Black Currants thrive best in a deep cool molst soil. On a dry sand or gravel, and on het shallow soils they are practically useless. They often grow luxuriantly on wet soil, but are liable to disease when the land is sour. A soil containing abundance of humus of vegetable matter suits them well, as such a soil is, as a rule, sufficiently damp for the meisture-loving rootlets, and sufficiently cool to prevent their ever stimulation. The whole of our bushes are raised from young wood—a most important factor in the future success of the crop—they are also free from disease.

SEABROOK'S BLACK,

SEABROOK'S BLACK. A spleudid Black Currant which possesses a strong constitution. A most prolific hearer. Our stock is perfectly clean. Those who are troubled with big bud or falling off in fruit sre strongly recommended to try it. The best Market variety we know. BOSKOOP GIANT BLACK. The finest Black Currant yet introduced. It is of extraordinary vigorous growth with long bunches of enormous fruit. Flavour, sweet and rich. A first-rate variety for exposed situations, and although it flowers late it ripens early.

Good, strong, Two-year old Stock, well-rooted, 1/- oach, 10/6 per doz., 75/- per 100, £35 per 1000.
Good Planting Stuff, 9d. each, 7,6 per doz., 55.-per 100, £25 per 1000.

CURRANTS-RED.

FAY'S PROLIFIC. One of the best Red Currauts. The bush is a strong grower, wenderfully prelifie, and comes into hearing early. The fruit is large, hright red, and of excellent flavour.

RABY 'CASTLE. A strong and good grower, very large herries of rich crimson colour, hangs late on the hushes; great heaver.

RED DUTCH. Late, enormous crepper; one of the hest Market sorts.

Good Strong Bushes, 1/- each; 10.6 dez.

PERFECTION RED. The finest and largest Red Currant in oultivation. The fruit, which is produced in long hunches, often having twenty fruits on a bunch, is of a heautiful glossy dark crimson colour; the fiavour is excellent, sweet and juicy. Award of Merit, R.H.S. Bushes, 3.6 each. Limited quantity only,

CURRANTS-WHITE.

TRANSPARENT WHITE. The largest and sweetest of White Currants.
WHITE DUTCH. A good currant for general purposes; splendid for dessert.

Good Strong Bushes, 1 - each; 10,6 per doz.

We have a fine lot of Fan-trained Currants, Our selection from the above-named varieties, 33- per doz.; each 3.-. Single and Double Cordons 33- per doz.; each 3.-.

"The Carrant Bushes you supplied me with two years ago produced 67 stone to the \aere."—Mr. E. A. DALE, Ludham, Gt. Yarmouth.

GOOSEBERRIES.

GOOSEBERRY, WHINHAM'S "INDUSTRY."

LANCASHIRE PRIZE VARIETIES

A very fine class, much esteemed for the spleudid size of their fruit and their value for exhibition or dessert. When well ripened they are of delicious flavour and equal to many forced fruits

We can supply good sorts, our selection only, Bushes, 2, - each, 21 - per doz..

GOLDEN DROP. Golden yellow, modium size, very early, delicions tlavour.
WHINHAM'S "INDUSTRY." A superb variety, bearing a wonderful profusion of large handsomo fruit, which are of a dull red colour when

WHITESMITH. White, large fruit, spleudid flavour, an exceedingly heavy cropper; early.

Bushes, 1/6 each, 16 - per doz.

We have a few Standards on about 3 ft. stems, our selection, 10/- each.
Fan trained, 3/- each, 33/- per doz.

From MR. J. CALDWELL, Blackrol.

July 22ad.

"Last Autumn you suppled me with Googe's Ty Bushes, these I am pleased to say have done very web, and produced a fair quantity of nice terr (s."

ALMONDS.

Standards 6 6 each.

MEDLARS.

For the successful cultivation of Medlars an open situation sheltered from cutting winds is absolutely essential. A good moist well-drained loam snits them best; but with an occasional mulching they grow well ou sandy soils. Standards 7/6 each.

NUTS AND FILBERTS.

We have a very fine stock of these in good strong plants, comprising such varieties as Cosford, Koutish Cob, Filbert, white, red, purple-leaved, etc.

STRONG FRUITING DWARFS or BUSHES in first-class condition. 2/= each, 21/= per dez.

BLACKBERRIES.

Most of them are quite hardy, and succeed well under similar culture to the Raspberry. The fruits are large, handsome and delicious, either raw, cucked, or preserved.

PARSLEY LEAVED. Very ornamental entloaved variety, which bears large fruit, good and productive. 1/3 cach, 12/6 per doz.

WILSON JUNIOR. Large fruit; delicious. 1/3 cach, 12/6 per doz.

LOGAN BERRY.

Strong Plants from layers, the true variety. 2/6 each; 27/- per doz.

GRAPE VINES.

Many good crops of grapes are grown in green-houses without any artificial heat, and often when other plants are entitivated in the same house. Great care must however be taken that plants are not grown which are liable to be attacked by Mealy Bug or Red Spider. Ferus, Palms, Bulbs, Chrysanthennums and Zonal Pelargonlums may however be grown in a vinery? The best position for a vinery is facing South or South-West, and a lean-to house is the best.

In making the border for planting, it is most important that ample drainage be supplied, especially so if the site is at all cold or wet.

To those about to plant vines we recommend the careful study of some good book, such as "Grapes and How To Grow Them," by J. Landsoll, price 3/9 post free.

The fruiting canes we offer are strong and stont, from eight to ten feet in length; and if cultivated in pois will bear from eight to twelve binnehes each next season.

H denotes those swieties that require a heated vinery.
C denotes those switable for growing in a coal vinery.
BLACK ALICANTE (H). One of the largest and best grapes for late work, carrying a fine bloom.
BLACK HAMBURG (C). Juicy, sweet and rich; a well-known and excellent sort, sometimes ripens ont of doors; the best for general use, pot culture, and forcing.

FOSTER'S SEEDLING (C). One of the finest and most easily cultivated of White Grapes; and a certain cropper.

GROS COLMAR (II). Borries very large, round, jet black with a beautiful bloom. Late and langs well.

GROS MAROC (II). Large oval black berries, covered with a dark dense bloom; an ex-

GROS COLMAR (II). Borries very diagry solution, jet black with a beautiful bloom. Late and liangs well.

GROS MAROC (II). Large oval black berries, covered with a dark dense bloom; an extremely handsome mid-season variety.

LADY DOWNES' SEEDLING (II). A first-rate black late hanging Grape of excellent flavour.

MADRESFIELD COURT. A very handsome black Muscat, with large oval herries, covered with a dense bluish plum-like bloom, branches very long and tapering. An excelleut variety for oarly use.

MUSCAT OF ALEXANDRIA (II). Rich amber; bunch and berries immensely large, with a deliciously rich, sweet Muscat flavour; requires a warm vinery; the favourite "Muscat."

ROYAL MUSCADINE. A fine hardy white; sneeceds well on a south wall.

SWEETWATER BUCKLAND (C). A round white early Grape, very showy and handsome. STRONG PLANTING CANES,

In pots, 10'6 each.

FRUITING CANES.

In pots, very fine, 12'6 and 15'- each.

STRAWBERRIES.

BEDFORD CHAMPION. One of the largest fruits in commerce, 2½ to 3 ozs. in weight. Bright searlet skin, tlesh white. 13/- per 100, 7/6 per 50, 5/- per 25.
GIVON'S LATE PROLIFIC. Large, wedge-shaped fruit of rich colour, and splendid flavour. Award of Merit, R.H.S. 13/- per 100, 7/6 per 50, 5/- per 25.

MONARCH. Largo hright red wedge-shaped fruit, flesh firm. 13/- per 100, 7/6 per 50, 5'- per 25.

5'- por 25.

PRESIDENT. Great cropper, colour crimson, superior. 13'- per 100, 7'6 per 50, 5'- per 25.

RELIANCE. A fine firm fleshed medium maincrop. 13'- per 100, 7'6 per 50, 5'- per 25.

ROYAL SOVEREIGN. Fine only variety. The best for pot culture. 13'- per 100, 7'6 per 50, 5'- per 25.

"St- per 25.

SIR JOSEPH PAXTON. Hardy early variety.
The sweetest and most reliable Strawberry grown. 13 - per 100, 7/6 per 50, 5/- per 25.

"THE EARL" (Laxton). A much improved vicountess II. do Thury," larger in size of fruit, and more vicorous and free cropping in habit; the davour is very rich yet juicy.

15'- per 100, 8 6 per 50, 5/6 per 25.
THE ADMIRAL. Maincrop, fine davour, bright red, good grower. 15/- per 100, 8 6 per 50, 5/6 per 25.
THE DUKE. A really read.

THE DUKE. A really good early variety; it forces well, fruit oval, medium size, good flavour. 20,- per 100, 4/- per doz.

RASPBERRIES.

PERFECTION.

Ground intended for these should be deeply trenched and heavily manured. The canes should be planted (not too deeply) about 2 feet apart and the rows should be 5 or 6 ft. apart, and after planting, a mulching of well-decayed manure should be placed ou the surface. Newly planted canes should be cut back to 2 feet to encourage the formation of suckers for the following season.

manure sbould be placed ou the surface. Newly planted cames should be cut back to 2 feet to encourage the formation of suckers for the following season.

BAUMFORTH'S SEEDLING. A fine variety, fruit very large, of the most beantiful crimson colour; an abundant bearer of good habit.

30/- per 160; 4/- per doz.

HAILSHAM. A new Autumn fruiting Raspbetry; the fruit is very large, of a rich crimson colour and excellent flavour; strong grower and heavy hearer.

45/- per 100; 6/- por doz.

HORNET (Rivers). A very fine Raspberry, fruit deliciously flavoured, and the mest juley of any variety. A splendid crapper, and will be largely grown when better known.

37/6 per 100; 5/- per doz.

PERFECTION. It is an exceptionally strong grower and makes a better plant the first year than any other variety. It is a good crapper, producing fruit from base to top of cauo of a bold size, firm, fine, aelduous flavour, and brilliant scarlet colour, the high colour being retained even when the fruit is fully ripe.

97NE'S ROYAL. A grand now Raspherry, the largest in cultivatiou. It is a strong and upright grower, quite distinct in habit and foliage; the canes are strong and starrdy and of most robust constitution. The large fruit is borne on short trusses on which they are very thickly set. A limited number of plants only.

26 each; 27/6 per doz.

SUPERLATIVE. Fruit very large, mostly freely produced; an excellent variety.

30'- per 100; 4'- per doz.

THE DEVON. Grand now Raspherry, growth most robust; trusses have been found to carry as many as sixty fruits; an enormous eropper, brings all its fruit up to a large size. For Jam making and Bottling it is of the highest value.

QUINCE.

Standards 7/6 cach.

WALNUTS.

ROYAL EARLY FRUITING. These have already fruited two years, and will grow and fruit well in a small garden. It is a soft shelled variety. The trees are about 8 feet. 15/- ea. Fino Standards 10/6 aud 12/6 each.

From Mr. J. T. GARTON, Bream.

Dec. 9th. "I am glad to tell you I was very pleased with the Raspberry Canes and Gcoseberries which I had from you last year."

COLLECTIONS OF CHOICE ROSES.

The Hybrid Tea Roses named in the following list are by far the most beautiful and useful for general cultivation in the Garden or for Table decoration or Exhibition. They commence blooming early in June and continue to furnish some fine bloom to the end of October. We have a fine collection of these, out that in reducing our number of varieties we have eliminated only the older and less popular sorts. We beg to point

MRS. WEMYSS QUIN.

We anticipate a very heavy demand for all the choicer Roses this season, and to prevent disappointment, strongly advise our customers to send us their orders as soon as convenient after receiving this Catalogue.

5/- each.

WHITE DOROTHY PERKINS. A white sport from the well-known Dorothy Perkins. 5/- ea.

W. A. RICHARDSON (Noisette). Fine deep orange yellow. 5/- and 7/6 each.

HINTS ON CULTIVATION.

In planting Roses, select, if possible, an open situation, where they get the full benefit of sun and air, and at the same time are sheltered from strong winds.

Roses will thrive in any good garden soil, but they have a decided preference for loamy elay; where the soil is heavy, a moderate dressing of soal ashes or coarse sandy grit will improve it, and if too wet drainage must be provided. November is the best month for planting, but this may be done in any favourable weather during the Winter months. In planting, make a good-sized bole, taking care to plant firmly; dwarfs should be planted with the juncture of their stems below the surface, and standards should be firmly staked and tied to prevent their disturhance by the wind.

To ensure a vigorous growth and fine blooms, freshly planted, and indeed all hybrid perpetual and other outdoor Roses, should be closely pruned about the early part of March, or later according to season. When the leaf-buds hegin to expand carefully thin out all weak-growing shoots or wood from the middle of the plant, and prune down the main stems to two or three eyes or huds on each stem.

A good top-dressing of well-decayed manure should be laid on the beds in Autumn, and may he lightly dug in in Spring. If the weather is dry when the plants are coming into hloom, give liheral waterings two or three times a week, and if fine blooms are desired for exhibition the buds should be thinned out, and liquid manure may be given freely once or twice a week.

Early in the season, when growth has fairly commenced, caterpillars should be carefully looked after and picked off hy hand, and if the plants later on are attacked by green-fly, they should be syringed at night with Quassia Extract.

From Mr. F. IRONS, Sheffield.
October 30th.
'I received your 'Town Close' Collection of Roses, and I am very pleased indeed with them; they are heyood my expectations.'

From Mr. H. THOMPSON, Torpolot. March 25th.

"The Roses you supplied me with In the Autumo are looking spleodid although we have had a terrihlo

From Mr. T. BROWN, Merthyr Tydvil.
November 19th.
"The Rose Trees I had from you turned out very satisfactory, and your collections are all first-class."

HARDY ORNAMENTAL TREES AND SHRUBS.

a great demand for all kinds of Ornamental Tress and Shrubs Ior refurnishing the gardens and pleasure grounds which had perforce been neglected during the war.

The coming Season will doubtless see a continuance of this work, and we have made ample preparations for supplying the needs of our customers in this important department of our

So much depends on the work of planting Trees and Shrubs which have been regularly transplanted, and here we are able to say that the whole of our huge stock of Trees has been transplanted during the past two years; we can therefore with confidence ask intending planters to place their orders in our hands.

During the past twenty years many most beautiful subjects have been added to the list of Flowering and Ornamontal Trees, and in the following pages all the most charming subjects are included.

following pages all the most charming subjects are included.

ACACIA INERMIS (Mop-headod Acacia). A magnificent circular head of haudsome follage for street planting, avonues, etc. A most attractive tree. Standards 10/6 each.

ACER (Maple). COLCHICUM RUBRUM. Very soft red-coloured leaves. Height 8 ft. 3/6 eac.

DRUMMONDI. Beautiful silver variegated leaves. Helght 8 -10 ft. 5/- each.

PLATANOIDES SCHWEDLERI. Very vigorous grower with leaves of a bright red colour. Holght 8 ft. 3/6 each.

NEGUNDO CALIFORNICUM AUREUM. This is a specially good variety, with large, broad golden follage. Standards, with 3-4 ft. stem, 3/6 each.

variety. 5/- cach.

varioty. 5/- each.

YUCCA FILAMENTOSA. Most useful plant, flowers freely. 2/6 each.

"RECURVIFOLIA. Particularly hardy variety

WEEPING WILLOW, KILMARNOCK.

SHRUBS suitable for Bedding and for Winter Decoration Outdoors.

We beg to draw your attention to the undermentioned Evergreen Shrubs, which we have pleasure in recommending for the purpose of winter decoration, and for the formation of permanent beds. By their compact habits, together with their capacity for being kept exceedingly dwarf, by being pruned to almost any extent, and by the many pleasing shades of colour that may be selected from amongst them, they provide both in winter and summer a most

distinctive leaters.

From Mrs. HOWARTH, Oldham.

November 3rd.

"I beg to thank you for Privets and Popiar; they are a fine lot. I am very pleased with them, the packing scae perfect."

From Mr. J. WATKINS, Pontyberem.
June 4th.
"We were very pleased with the Trees which came safely to hand last week, and we are very thankful to you for your kindness,"

From Mr. B. JACKSON, southwold.

November 26th.
"I might add the Privets I recently had from you were safely received, are thriving well, and quite satisfactory."

TRANSPLANTED FOREST TREES, HEDGING AND UNDERWOOD PLANTS FOR GAME COVERTS.

One of the most important lessons which this war has taught us is the absolute necessity of growing more timber in the United Kingdom, and the Authorities are already embarking on large schemes of afforestation, but much can also be done on small areas of land. Even where the land is unsuitable for ordinary cultivation many kinds of valuable timber trees will thrive and give a good return on the outlay necessary for trees and planting. To meet the demand for Forest Trees we have considerably increased our Stock in this direction, and it will be found to comprise all the best varieties for Forest and Estate planting; further, we make it a practice to grow our trees thinly in wide rows which emanres their being thoroughly hardened when moved to exposed situations. We shall be pleased to give estimates, free of cost, for all kinds of planting, Forest or otherwise, and will carry out the entire work if desired. Our prices, taking quality into consideration, are exceedingly moderate, and we are prepared to compete with any respectable firms in the trade. Extra Selected Plants, and smaller quantities than quoted, will be charged proportionally higher.

We shall be pleased to submit samples of any Forest Trees. Carriage Free.

ACACIA. Common. Very ornamental tree.

Our prices, taking quality into consideration, Selected Plants, and smaller quantities than quoted, we shall be pleased to submit samples of any ACACIA, Common. Very ornamental tree, growing freely en peor, sandy soll. Specimen Trees, 3/6 each.

ALDER, Common. Grows well on wet, undralned solls. Specimens, 2/6 each.

ARBOR-VITÆ (Thuya Occidentalis). Very compact growing tree, hardy, makes a splendid ornamental hedge. Helght 2—3 ft. 2/- oach, 21/- per doz.; 3—4 ft. 3/- cach. Larger trees 3/6 and 5/- cach.

ASH, Common. Requires good land; timber valuable when well grown. Ht.10-12 ft. 2/6 ca. MOUNTAIN. Very ornamental tree, most valuable for exposed situations. Height 5—6 ft. 6/- per doz., 8—10 ft. 3/6 each.

AUCUBA JAPONICA VARIEGATA. Grows well under shade of trees. Height 1½—2 ft. 2/6 each. 27/6 per doz.

BEECH, Common. Grows well on any good light soll, alse makes a splendid hedge, retaining its foliago during winter. Height 3—4 ft. 25/- per 100. Specimon Trees, 3/6 ca.

BERBERIS AQUIFOLIA. Excelent for game coverts and shruhberies. Height 1—1 ft. 5/- per doz., 30'- per 100.

DARWINII. Densely hrauched evergreen with large yellow flowers. Ht. 2-3 ft. 2/- ca., 21/- dz., yULGARIS. The common fruit-hearing Barbery. Height 2—2 ft. 2/- cach, 21/- doz. BIRCH, Common. Succeeds in moist situations, wet, undrained or hog land. Timher fine-grained and valuable, Makes the hest charcoal for gunpowder. Height 10—12 ft. 3/6 ca., SILVER. One of the most heantiful of our forest trees. Succeeds in moist situations, wet, undrained, or hog land. Height 9—12 ft. 3/6 cach. Specimen Trees S/- each.

BOX, TREE. This forms a handsome hedge for ornamontal purposes. Height 16—15 ft. 1/3 each, 12/- per doz.

BROOM, Common. Transplanted, 5/- per doz., 35/- per 100.

It unkes very fine specimens if kept elipped. Height 2—3 ft. 30/- 100. Specimens, extra fine bushy plants, grown 3 ft. apart. Height 3—4 ft. 8/- each, 30/- doz.; 4—5 ft. 3/6 each, 36/- doz.

SNOWBERRY. Height 2—3 ft. 15/- per 100. SYCAMORE. Vory hardy, and stands the sew winds hetter than most other trees; grows freely in any soil, very ornamental, and excellent timber. Height 5 ft. 20/- per 100. Specimen Trees 3/6 and 5/- each.

THORNS or QUICKS. This is the hest of all plants for an efficient hedge. Height 11-24 ft. 21/- per 100, 180/- per 1000.

YEW (Taxis), Common. The most Ornamental of all evergreen hedges, it should not be planted in any situation accessible to animals that night cat it. Hardy and a compact growor. Height 1½—2 ft. 1/9 each, 18/- per doz., 2—2 ft. 2/6 cach, 27/- per doz., 3—3 ft. 3/6 each, 40/- per doz. Specimens 5/- each.

THE TRUE BAT WILLOW.

(Salix alba var. cærulea).

(Salix alba var. cærulea).

The fastest growing, most profitable and best variety.

This fine Willow is a first cross between Salix tragitis and S. alba, and is known as Salix alba variety. It was at first thought to be only a variety of S. alba, but is found to grow much faster than that varioty, and that it occurs only as a female plant.

The true variety which we offer is grown from cuttings originally taken by Mr. Shaw, the eminent hat-maker, from a troe which he selected as helng the hest variety for making high-class cricket bats.

Fine solected standards, 10-12 ft. 18/- dz., 125/-100

CONIFERÆ.

All have been recently transplanted so as to ensure as far as possible salety in removal, abundance of room and attention have been given so that each tree may be a perfect specimen. Our trees are all hand pruned with a knife, which is a most important point.

We offer well shaped plants, suitable for potting or window boxes, in good variety, our selection. 18 inches, 1/9 each, 21/- per doz. 24 inches, 2/8 each. 24/- per doz. We have a fine lot of Dwarf-growing Coniferæ, suitable for Rockeries, at 3/6 each.

We have a fine lot of Dwarf-growing Conner

ABIES CANADENSIS (Hemiock Spruce).

Height 2—3 ft. 3/- each.

NOBILIS. Very fast-growing Fir; hardy.

Height 2 ft. 3/- each.

NORDMANNIANA. Height 3 It. 5/- each.

PINSAPO. Height 2—3 ft. 5/- each.

ARAUCARIA IMBRICATA. A most distinct tree. Height 3 It. 10/6 each.

CEDRUS ATLANTICA. Fast-growing. Height 3 ft. 5/- each, 4 ft. 7/6 and 10/6 each.

GLAUCA. Glaucous-leaved. Height 3—4 ft. 7/6 and 10/6 each.

DEODARA. 3 ft. 5/- each, 4 ft. 10/- each.

CRYPTOMERIA ELEGANS. 3 ft. 5/- each.

CRYPTOMERIA ELEGANS. 3 ft. 5/- each.

ALLUMII. Height 3 ft. 3/6 each, 4 ft. 5/- each.

ALLUMII. Height 3 ft. 3/6 each, 4 ft. 5/- each.

ALLUMII. Height 3 ft. 3/6 each, 4 ft. 5/- each.

REPORTAL MERICAL HEIGHT 1 ft. 3/- each.

** ALLUMII. Height 3 It. 5/6 each, 4 It. 6/each.

** ERECTA VIRIDIS. Height 2 It. 2/6 each, 3 It. 5 - each.

** GRACILIS. Very graceful, drooping habit. Height 2 It. 3/6 each.

** LUTEA. Height 2—2½ It. 7/6 each.

** MACROCARPA (In pots). Very handsome. Height 2—3 It. 3/6 each.

** NOOTKATENSIS. Very pretty. Height 3 It. 3/6 each.

**GINKGO (Maiden Hair Tree) (Salisburla adiantifolia). Height 2—3 It. 2/6 each.

**JUNIPERUS (Juniper). CHINENSIS. Height 2—2½ It. 3/6 and 5/e each.

**COMMUNIS FASTIGIATA. Irish Juniper. Height 2—3 It. 2/6 each.

**SABINA. Very hardy, well-known variety. Height 1½—2 It. 2/6 each.

**PICEA PUNGENS. Height 2—2½ It. 2/6 each.

CEDRUS ATLANTICA

We have a fine lot of Dwarf-growing Conileres, suitable for Rockerles, at 3/6 each.

PICEA PUNGENS GLAUCA (Blue Spruee).

Height 2 ft. 5/- each.

PINUS CEMBERA. Height 3—4 ft. 5 - cach.

EXCELSA. Height 3—4 ft. 5 - each.

RETINOSPORA OBTUSA. Light green foliage:

Height 2—3 ft. 3/6 each.

PISIFERA. Height 3—4 ft. 3/6 oach.

"AUREA. Very fine golden varlety.

Height 2 ft. 5/- oach.

PLUMOSA. Height 2—2½ ft. 2/6 each.

"SQUARROSA. Height 2 ft. 3/6 each.

"SQUARROSA. Height 2 ft. 3/e each.

TAXODIUM DISTICHUM. Very ornamental, light feathery foliage, should he closely pruned when transplanting, changing to rich brown in Autumn. Height 4 ft. 5/- oach.

TAXUS AUREA (Golden English Yew). Height 2 ft. 3/6 each, 3 ft. 5/- each.

"FASTIGIATA (The Irish Yew). Very dark foliage, with upright hahit. Height 2 ft. 3/6 each, 3 ft. 5/- each.

THUJOPSIS DOLABERATA: Compact hahit. Height 1½—2 ft. 2/6 each, 2—3 ft. 5/- each.

THUJOPSIS DOLABRATA: Compact hahit. Height 1½—2 ft. 5/- each.

"VARIEGATA. Variegated form of Dolabrata. Height 2 ft. 3/6 each.

THUJA LOBBII, Height 3 ft. 2/6 each.

"VARIEGATA. Similar growth to Thuja Calbergar and the golden of property of the content of the con

Dolabrata. Height 3 ft. 2/8 each, 2 in. 3/8 each, 2 in. 3/8 each.

"ZEBRINA. Similar growth to Thuja Lohbii; nice golden variegated foliage. Height 2—2½ ft. 3/6 each.

"LUTEA (Golden Arborvitæ). Height 2—3 ft. 3/6 each.

VERVAENEANA. Height 2 It. 3/6 each.

3 ft. 5/- each.

HARDY CLIMBING & OTHER PLANTS.

SUITABLE FOR TRAINING ON WALLS, &c.

These are mostly grown in pots, and can be supplied and planted any time of the year with perfect safety.

Orange-red and yellow; very THE GEISHA. fine.

SIX BEAUTIFUL VARIETIES, our selection, including Snow White, 5s.; is. each;

9s. per dos.

HARDY PERENNIAL FLOWERING PLANTS.

Probably no section of the garden has suffered more during the past few years than the Herhaceous Borders.

Where it was not found expedient to dig up the borders and plant Food Crops, little attention could be given to the cleaning, staking and manufact the plants, and as a consequence most of the stronger growing sortisg of quite out of hand and the more delicate ones perished.

In the years immediately preceding the war this beautiful class of plants had been brought to a high state of cultivation, and we are sure that from an ornamental point of view and for maintaining a supply of flowers for indoor decoration, it will be desired to lose no time in re-establishing the Perennial border, and there is no time like the Spring for taking this work in hand. In the following lists will be found all the most popular sorts, many of which may be had in strong flowering clumps to give immediate effect.

A PORTION OF AN HERBACEOUS BORDER AT OUR NURSERIES.

HILLÆA PTARMICA—THE PEARL. Large double, pure white flowers; fine for cuttlng. 1/- each.

HIS MAJESTY. Round flowers of deep orange. 1/- cach. 10/6 per doz.

ORANGE GLOBE. Very large deep orange flowers; a strong grower and free bloomer. 1/3 each.

TROPÆOLUM SPECIOSUM. Producing a blaze of searlet flowers in late Summer and Autumn; grows rapidly. 1/6 each.

VERBASCUM CALEDONIA. Grand spike of sulphur-shaded lake flowers. 1/6 each.

DENSIFLORUM. Flowers of a golden bronzy that. Height 4 ft. 1/6 each.

VIOLAS. Cholco named varieties. Our selection.

4d. each, 3/- doz., 21/- per 100.

Wo are able to supply extra sized clumps from the open ground, and we shall be glad to send a list of these to anyone wanting to obtain immediate effect.

From Miss COLLARD, Liphook.

The Shrubs and Plants received io good condition, and are quite sat stactory

From Mr. A. GREGORY, Ogmore Vale.
October 23rd.
"I am very pleased with the last lot of Plants that
I received from you."

PÆONY. See page 92.

DANIELS' SPECIAL COLLECTIONS OF HARDY FLOWERING

We have much pleasure in recommending the following four collections, which contain a very choice selection of the above, specially arranged for a brilliant and varied display of colour and a long continuauce of bloom in the open garden.

COLLECTION A. 100 in 50 fine varieties, our selection, 70/-. COLLECTION B. 50 in 50 fine varieties, our selection, 40/-

Our own selection, 10/6 per doz.

COLLECTION C. 50 in 25 fine varieties, our selection, 35/-. COLLECTION D. 25 in 25 fine varieties, our selection, 21/-

Mostly olumps from open ground.

VIOLETS—(Sweet-Scented).

SINGLE-FLOWERED VARIETIES.

ASKANIA. The freest winter flowering violet; an improvement on "Princess of Wales," the best of all single varieties.

PRINCESS OF WALES. A grand variety, producing very large, beautifully formed, rich violet hlue flowers.

THE CZAR. Very dark and free.

DOUBLE-FLOWERED VARIETIES.

Most beautiful for hutton holes and are easily grown in frames during the Most beautiful for nitron holes and are easily grown in traines during too-Winter.

COMTE DE BRAZZA. Large, double, pure white flowers, delleiously scented.

LADY HUME CAMPBELL. Later and darker than Marie Louise.

MARIE LOUISE. Large double flowers, rich lavender blue.

NEAPOLITAN. Lavender blue, flowers very large and double, profuse

bloomer

Single-Flowered and Double-Flowered Varieties, 9d. each; 8 - per doz. Carriage extra.

ALLWOOD'S HARDY PERPETUAL PINKS.

DOROTHY. Deep rose-pink with dark centre. HAROLD. Largo double white.
JEAN. White with deep violet centre.

MARY. Pale rose-pink with light maroon centre. PHYLLIS. Lilae, free flowering and delightfully perfumed.

In small pots, 2/6 each; 27/- per doz.

ROBERT. A delicate shade of oid rose with a light maroou centre.

WALLFLOWERS.

DANIELS' DOUBLE VARIETY. Tail grand spikes of double blooms, about 2 ft. high, in April and May. 4d.each, 26 doz., 18-100. DWARF MIXED DOUBLES. 12 inches high. 4d. each, 2/6 per doz., 18/- per 100.

WALLFLOWER. Blood Red. 2/- per doz., 14/- per 100.
Eastern Queen. Chamois, changing to salmonrosc. 2/- per doz., 14/- per 100.

WALLFLOWER. Fire King. 2/- doz., 14/- 100., Golden Monaroh. 2/- per doz., 14/- per 100., Primrose Dawn. 2/- per doz., 14/- per 100., Vulcan. 2/- per doz., 14/- per 100.

All the above are transplanted and grown thinly, and will therefore give good results.

SPIRÆAS—NEW PINK.

QUEEN ALEXANDRA. Bright pink.

These made quite a sensation when Exhibited at Holland House, and were awarded the Gold Medal of the Royai Horticultural Society.

Each variety 2s. each; per doz. 21s.

PLANTS SUITABLE FOR ROCKWORK.

This most delightful department of Hardy Plants is now represented in our Nursery by a wide range of all the most charming subjects suitable for Rock and Wall gardening. Those of our customers who desire to add a collection of Rock plants to their garden will find all the gems offered below.

Where space is limited very charming effects may often be obtained by forming a rockery, and if care is exercised in planting it a continual show of

bloom may be had from early Spring until late in Autumn. One great advantage of Rock Gardening is, that it may be introduced in positions where very often little else will grow, as the labour entailed in the tykeep of a Rockery is small and an immediate effect is produced. We strongly recommend this branch of gardening to our customers.

One great advantage of Rock Gardening is, to preced a Rockery is small and an immediate of a Rockery is small and an immediate of a Rockery is small and an immediate of the control of th

BEGONIAS.

We have much pleasure in offering tubers of our grand strains of Tuberous-rooted Begonias: These have been grown and selected at our Nurserles during the past season, and for form, size, substance of flower, and beauty and variety of colouring are second to none.

DANIELS' DOUBLE-FLOWERED BEGONIAS

(Dry Tubers).

The Double-flowered Begonlas are especially recommended for pot culture. The colours of the flowers vary from the darkest orimson and scarlet, through all the most beautiful shades of salmon, rose, and yellow, to the purest white. They are easily grown, and with their large massive blooms form strikingly handsome objects for the greenhouse or conservatory.

DOUBLE BEGONIAS. In distinct colours for pots or bedding out.

Fine double flowers, carefully selected when in bloom, and first class for pot culture or the garden. RED, YELLOW, WHITE, SALMON, ROSE ... 9d. each; per doz. 7/6; per 100 50 0

SINGLE-FLOWERED BEGONIAS (Dry Tubers). Pot culture.

FOR GREENHOUSE AND CONSERVATORY. A very fine mixture of choice selected flowers, mostly equal to the named sorts, the flowers being perfect in form and of the most beautiful eclours

9d. and 1/- each; per doz. 7/6 and 10/6

CUT FLOWER DEPARTMENT.

All designs are most carefully packed in special cases, and our system is such that they will stand a journey of twenty-four hours, if necessary, and arrive quite fresh. It is much the best to keep the boxes closed and in a dark cool place until needed, so as to hold the moisture about the flowers, and thus retain their freshness for a longer period.

MEMORIAL WREATHS, CROSSES, ETC.

These are most beautiful and artistic in appearance, being made up of freshly cut flowers. They are composed either of white

or coloured flowers, according to the wishes of our customers; Violets, Roses, Carnations, etc., may be used when in season.

We are continually asked to make up special designs and emblems for Masonic and other funerals, and we shall be most happy to be entrusted with instructions for these special occasions.

Each 12/6; 15/-; 21/-; 31/6; 42/-, and upwards.

WEDDING AND OTHER BOUQUETS.

All orders for Bouquets are made up with the choicest flowers in season, and the important details of artistic arrangement and blending of colours receive most scrupulous attention; we are glad to say we invariably give the highest satisfaction.

It is most important that instructions should be given at the time of ordering, as to whether "Shower" or hand bouquets are desired, also the colours of the dresses which the flowers used in the Bridesmaids' Bouquets are to match.

BRIDES', PURE WHITE FLOWERS. Either with or without "Showers." Each 21/- to 42/-.

BRIDESMAIDS', WHITE OR DELICATELY TINTED FLOWERS. Each 15/- and upwards.

PRESENTATION BOUQUETS FOR BAZAARS, FETES, ETC. Each 15/- and upwards.

GENTLEMEN'S BUTTON-HOLES, WHITE OR COLOURED FLOWERS, from 1/6 each.

LADIES' SPRAYS. Beautifully made up to order, any colour, from 3/- each.

LOOSE CUT FLOWERS AND FERN FOR WEDDING, ALTAR, VASES AND OTHER DECORATIONS, in boxes, from 5/- per box.

All the prices quoted for Cut Flowers and Floral Designs are strictly net. Package and Carriage extra.

IMPORTANT.

All orders are despatched promptly on receipt, if required, but customers should, if possible, give at least two days' clear notice before the flowers are required, also full particulars for forwarding. Orders from unknown Correspondents must be accompanied by remittance. We would suggest that orders for Wreaths, &c., should be marked URGENT on the Envelope.
